Vol. LVII No. 1

Wednesday, February 7, 1973

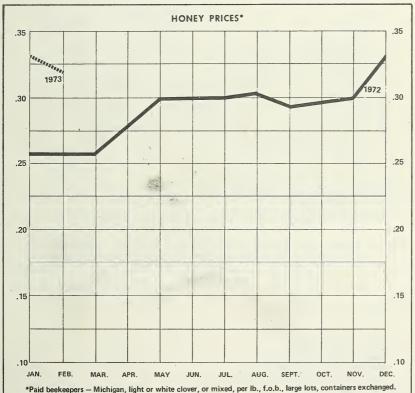

JANUARY HIGHLIGHTS

Honey prices were steady in most states. Offering continued light. Demand was good.

Colonies were in good condition in most areas. Mild temperatures permitted bees to make several cleansing flights. A few areas were concerned about early broodrearing. Supplemental feeding was necessary in some yards.

Cold weather prevailed over most of the Nation the first two weeks of January. Above normal temperatures were reported in most states during latter part of

* * * *

*Paid beekeepers - Michigan, light or white clover, or mixed, per lb., f.o.b., large lots, containers exchanged. No prices reported April or June.

U. S. DEPARTMENT OF AGRICULTURE

FRUIT AND VEGETABLE DIVISION - AMS

Prices represent sales reported by correspondent beekeepers and honey handlers. Becasue of the many thousands of beekeepers and handlers in the country, prices should be considered as representative and not as completed coverage of transactions for any State or areas.

PRODUCERS' SALES LARGE LOTS EXTRACTED HONEY TO PACKERS AND OTHER LARGE USERS PER LB.*

* Rounded to nearest dollar or half-dollar unless under one dollar. # Two weeks ending

 $\underline{1}/$ The terms C&F and CIF sometimes include points in addition to Hamburg, such as Bremen, Rotterdam or Europe. Terms FOB are usually from port nearest origin in source country.

2/ "MT" means "metric ton" (2,204.62 pounds); "LT" means "long ton" (2,240 pounds); "kgs" means "kilograms" (2.2046 pounds).

3/ Quotations stated in money units of offering countries have been converted to U.S.

dollar equivalents. "NO" means "No Offer."

4/ "Dlvry" means "Delivery period." Symbol meanings are: J-F = January-February, F-M= February-March, M-A 2 March April, A-M = April-May, M-J = May-June, M-JJ = May-July, COLONY, HONEY PLANT AND MARKET CONDITIONS DURING JANUARY

CALIFORNIA POINTS

Trading between beekeepers and honey handlers was light during the month, reflecting the short supply still in beekeeper control. Handlers continued to depend heavily upon out-of-state or imported supplies. Some California honey continued to be delivered on earlier contracts. Demand from retail outlets was irregular, several handlers reported very good movement while others reported movement slower than in December. Prices to retail outlets were generally higher, though some discounting was reported. With strong export interest, a number of handlers were unwilling to meet competitive discounting. However, export trading was light and mostly packaged stock. Prospects now appear very favorable for a good spring flow of light colored honey, but the supply of light amber honey was expected to continue short until early

CALIFORNIA POINTS (Continued) summer flows become available. Eucalyptus trees in many areas were reported severely damaged by the December freeze.

NORTH PACIFIC STATES

Oregon - Offerings of honey were light. Demand was good and the market steady.

Colonies were in fairly good condition. Bee populations ranged from moderate to heavy and stores were ample in most areas. Bees were dormant. A few warm days permitted cleansing flights. No brood development was reported.

Most honey plants were in good condition, although some freeze damage was reported in southern section of Willomette Valley. Fruit buds were damaged, and in some cases, entire trees. Peaches, pears, filberts and walnuts,

NORTH PACIFIC STATES (Continued) blackberries, cherries appeared to be hardest hit. Vetch plantings appeared to be in good condition. Unseasonably warm weather the past two weeks caused development of plants and beekeepers were concerned since cold weather is still quite possible.

 $\frac{\text{Washington}}{\text{the light offerings of honey.}} \text{ - Prices were steady for}$

good.

Most colonies continued in fairly good condition. Bee populations were moderate and stores ample. Bees were dormant, except mild days permitted several cleansing flights.

Honey plants were dormant, although apparently in good condition. Soil mois-

ture was normal.

INTERMOUNTAIN STATES

Colorado - Most beekeepers had sold all of honey. No prices were reported. Many colonies were in poor condition. Bee populations were light. Stores were ample in most areas. Bees were dormant. Due to the heavy snow cover and extreme cold temperatures bees were unable to make cleansing flights.

Soil moisture was above normal.

Honey plants were dormant.

Montana - Offerings of honey were light. Most beekeepers reported a good demand. Prices were slightly higher.

Most colonies were in fairly good condition. Bee populations ranged from moderate to heavy. Stores were ample. Bees were dormant.

The condition of honey plants ranged from poor to good. Soil moisture was below normal in some sections and normal in others.

<u>Utah</u> - No report was made on honey market conditions.

Most colonies were in need of cleansing flights. Early feeding was anticipated.

Soil moisture was below normal.

Wyoming - Offerings of honey were light. The demand was fair and prices were steady.

Colonies were in good condition. Bee populations were moderate and stores ranged from light to ample. Some supplemental feeding of comb honey or dry sugar was reported.

Honey plants were dormant, although apparently in good condition. Soil moisture was normal.

SOUTHWESTERN STATES

Oklahoma - Honey offerings were light and the demand was good. Prices were about unchanged.

Colonies were in fairly good condition. Bee populations were moderate and stores were ample. Bees were dormant.

Honey plants were in good condition with the soil moisture above normal.

SOUTHWESTERN STATES (Continued)

Texas - Prices were about steady for the light offerings of honey. The demand was good.

Colonies were in good condition. Bee populations ranged from moderate to heavy and stores were ample. Beekeepers reported some supplemental feeding of sugar cakes and pollen substitute.

Honey plants were in good condition. Soil moisture ranged from normal to above normal. River Elm was in budding stage and expected to bloom in near future. Growing conditions looked very good for an early brush flow that usually starts the first week in April in the Pearsall Section.

PLAINS STATES

<u>Iowa</u> - Offerings of honey were moderate. The demand was good and prices were steady.

Colonies were in good condition. Bee populations were moderate and stores ample. Bees were dormant, although two warm periods permitted bees to move to new stores, and in some cases, take flights.

Honey plants were in good condition with the soil moisture above normal.

Kansas - Demand was good and the market was steady.

Colonies were in good condition. Bee populations were moderate and stores ample.

Honey plants were in good condition with soil moisture above normal in most areas.

Nebraska - Offerings of honey were light. The demand exceeded the supply and prices were slightly higher.

The condition of colonies was average. Bee populations were moderate and stores ample. Bees were dormant. Beekeepers expressed concern about long, extremely cold winter. A few mild days in early January did permit bees to make a good cleansing flight. Also, bees were able to move to other honey stores in hive.

Honey plants were in good condition with soil moisture above normal.

North Dakota - Offerings of honey ranged from light to moderate. The demand was good and prices were slightly higher. Colonies were in fairly good condition. Bee populations were moderate and stores ample. Bees were dormant. Some supplemental feeding of sugar syrup was reported.

Honey plants were in good condition with a good snow cover. Soil moisture was normal.

 $\frac{\text{South Dakota}}{\text{very light.}} \text{ - Offerings of honey} \\ \text{were very light.} \\ \text{The demand was only fair} \\ \text{at higher prices.}$

The general condition of colonies was average. Bee populations were moderate and stores ample. Bees were dormant. Some supplemental feeding was expected to start in February.

PLAINS STATES (Continued)

South Dakota (Continued) Honey plants were in good condition with soil moisture normal.

CENTRAL STATES

Illinois - The demand for honey exceeded the supply. Prices were steady.

Colonies were in fairly good condition with bee populations moderate. Stores were light. Some supplemental feeding of sugar cakes, dry sugar and pollen cakes was reported.

Honey plants were in good condition with soil moisture above normal.

Michigan - Offerings of honey continued light. The demand was moderate. Prices were slightly lower.

Colonies were in fairly good condition. Bee populations were moderate. Stores were light. Some supplemental feeding of sugar syrup, or cakes, was necessary. Several warm days in mid-January permitted bees to make cleansing flights.

Honey plants were in good condition with soil moisture above normal.

Minnesota - Offerings of honey were light and prices steady.

Colony conditions were average. Bee populations ranged from moderate to heavy. Stores were ample in most yards. One beekeeper reported light stores with some supplemental feeding. Low temperatures were reported most of the month, although slightly warmer temperatures around the middle of the month permitted bees to move to fresh stores and make partial flights.

Honey plants were in good condition with soil moisture ranging from normal to above

Wisconsin - Offerings of honey were very light. Demand was good and prices were about

Colonies were in good condition. Bee populations ranged from moderate to heavy. Stores were ample in most yards. Temperatures in the low 40's permitted to make cleansing flights on a bee**s** couple of days.

Honey plants were in good condition. A good snow cover was reported. Soil moisture was above normal.

NORTHEASTERN STATES

Connecticut - Colonies were in good condition. Bee populations were moderate and stores ample. Mild temperatures during January permitted bees to make several cleansing flights.

Honey plants were in good condition with soil moisture normal.

New Jersey - Offerings of honey were light. The demand was good and prices were

Colony conditions were average. Bee populations were moderate. Stores were light light to moderate. Stores were light. Mild temperatures the latter portion of January caused broodrearing to start. Also,

NORTHEASTERN STATES (Continued)

New Jersey - (Continued) those colonies that went into winter with less than ample stores will need supplemental feeding.

Honey plants were in good condition with soil moisture above normal in most areas.

New York - Offerings of honey were moderate. The demand was good and prices about steady.

Most colonies were in fairly good condition. Bee populations were moderate. Some hives were getting low on stores. Colonies consumed unusual large amounts of honey during January due to mild temperatures.

Honey plants were in good condition. Soil moisture was above normal, although snow cover was light.

Pennsylvania - Offerings of honey continued light. The demand was good and prices were slightly higher.

Colonies were in good condition. Bee populations were moderate and stores were ample in most yards. Bees had a good flight on January 1 and again on the 16th and 17th of the month.

Honey plants were in very good condition with the soil moisture above normal.

SOUTH ATLANTIC STATES

Kentucky - Honey market conditions were not reported.

Colonies were in fairly good condition. Bee populations were moderate. Stores were light in some hives. Supplemental feeding was necessary in some areas. Also, some colonies have suffered above normal bee loss. Several cleansing flights were reported.

Maryland - Offerings of honey were light. The demand was good and prices were steady.

The condition of colonies was average. Bee populations were moderate and stores ample.

Honey plants were in good condition with soil moisture above normal.

North Carolina - Offerings of honey were moderate. The demand was fair. Prices were steady.

Colony conditions were average. Bee populations were moderate and stores light. No supplemental feeding was reported, although bees consumed above normal amount of stores.

Honey plants were dormant. Soil moisture above normal.

Tennessee - Offerings of honey were light. The demand was good and prices were steady.

Most colonies were only in fair condition. Bee populations ranged from Feeding was necessary in some yards. Several cleansing flights were reported.

SOUTH ATLANTIC STATES (Continued)

Tennessee (Continued) Honey plants were in good condition with soil moisture above normal.

<u>Virginia</u> - Offerings of honey were light. The demand was good and prices were slightly higher.

Colonies were in good condition. Bee populations were moderate and stores ample in most hives. Some supplemental feeding of sugar syrup or cakes was reported.

Honey plants were in good condition with soil moisture above normal.

<u>West Virginia</u> - Honey prices were slightly lower.

Colonies were in good condition with bee populations heavy. Stores were ample. Beekeepers reported some supplemental feeding of syrup. Bees made several cleansing flights.

Soid moisture was above normal. No report was made on honey plants. $\,$

SOUTHEASTERN STATES

Florida - Offerings of honey were light. The demand was good and prices were steady.

The general condition of colonies was average. Bee populations were moderate and stores were building up. Bees were working wild flowers.

Soil moisture was above normal in most areas of the State. Honey plants were in good condition.

Georgia - January temperatures were slightly above normal. Rainfall was about normal.

Most colonies were in normal condition. A few hives were short on stores. Some supplemental feeding was necessary. In South Georgia, bees were working Red Bud Maple. Broodrearing was beginning in a few areas.

No honey prices were reported.

TERMINAL MARKET REPORTS

Market prices (sales or quotations as indicated under each city) shown below were obtained from local brokers, packagers, wholesalers and other receivers in the respective cities. Current quotations are shown for markets where sales for the period could not be obtained. Sales are usually subject to a one percent (1%) discount if payment is made within 10 days. Comments on market conditions reflect the opinion of the local trade for the month of January. Sixty-pound cans are on a per pound basis and smaller units of honey are on a per case basis unless otherwise stated: Beeswax prices are per pound.

HONEY PRODUCTION 1972 ANNUAL SUMMARY

12,

12,

1972 totaled 214.6 million pounds--up 9 per- production compared with 16 percent in 1971. cent from the 1971 crop, according to the Crop Reporting Board. This year's honey crop was produced by 4.1 million colonies, down 1 percent from a year earlier. Colony numbers have declined each year since 1958. Yield of honey per colony was 52.8 pounds, compared with 48.0 in 1971. Beeswax production totaled 4.0 million pounds in 1972, 12 percent more than was produced in 1971.

39½-41¢.

In mid-December, producers reported 30.0million pounds of honey on hand for sale, compared with 30.9 million pounds the previous year. Stocks in mid-December

Honey production in the United States during represent 14 percent of the 1972 honey

Trays

Jars (Raw)

2-1b.

6.05

The honey flow was generally more favorable than in 1971, especially in North and South Dakota, where late summer rains made possible an excellent crop. California with 500 thousand colonies produced 24.5 million pounds, 11 percent of the Nation's production. Florida with 350 thousand colonies produced 26.6 million pounds.

Honey producers received an average of 31.3 cents per pound for honey during 1972, 44 percent above the 1971 average price of 21.8 cents per pound and the highest price since 1947. These prices relate to all wholesale

and retail sales, extracted, chunk and comb honey from apiaries owned by farmers and non-farmers.

Extracted honey in wholesale lots sold for an average price of 28.6 cents per pound, 9.0 cents above 1971. Unprocessed bulk honey averaged 27.0 cents per pound compared with 18.0 cents in 1971. Sales or processed bulk honey averaged 29.8 cents per pound, 8.5 cents higher than a year earlier. Processed packaged sales averaged 37.2 cents per pound compared with 31.3 cents in 1971.

Prices received for retail sales of extracted honey averaged 43.1 cents per pound in 1972, 6.5 cents above 1971.

Sales of all chunk honey (wholesale and retail) averaged 51.4 cents per pound, 10.8 cents above a year earlier. Prices for all comb honey averaged 52.6 cents per pound compared with 46.3 cents in 1971.

Beeswax prices averaged 62.0 cents per pound, 0.7 cents higher than in 1971.

MONTHLY REPORT

UNITED STATES DEPARTMENT OF AGRICULTURE

2503 S. Agriculture Bldg., Washington, D.C. 20250 Fruit and Vegetable Division

Vol. LVII No. 2

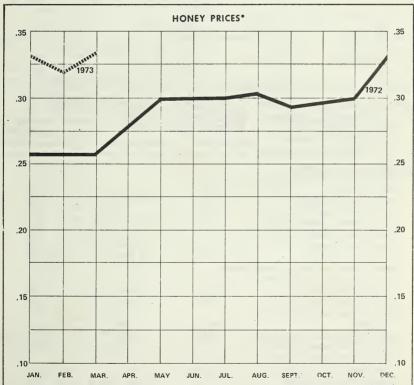

FRIDAY, March 9, 1973

FEBRUARY HIGHLIGHTS

The majority of beekeepers had sold honey. The light supply of honey offered was selling at steady to slightly higher prices. Beeswax prices were mostly unchanged.

Colonies were in good condition in most states, although supplemental feeding was necessary in many areas. A few mild days in most northern states permitted bees to make cleansing flights. Brood rearing was underway in many of southern and central states.

Honey plants were in good condition. Soil moisture was normal, or above normal, in the majority of the states.

*Paid beekeepers - Michigan, light or white clover, or mixed, per lb., f.o.b., large lots, containers exchanged. No prices reported April or June.

U. S. DEPARTMENT OF AGRICULTURE

FRUIT AND VEGETABLE DIVISION - AMS

Prices represent sales reported by correspondent beekeepers and honey handlers.

Because of the many thousands of beekeepers and handlers in the country, prices should be considered as representative and not as complete coverage of transactions for any State or areas.

PRODUCERS' SALES LARGE LOTS EX	TRACTED HON	NEY TO PACKERS AND OTHER LARGE	USERS PER LB.

FOOTNOTES FOR PAGES 1-5

1/ State or origin indicates where packed, not necessarily where produced. The term "clover" includes most legumes such as white dutch clover, yellow, white sweet clover and occasionally such legumes as alfalfa and vetch mixed with other clover. 2/ Containers exchanged. 3/ Containers included.

NOTE: F.o.b. as used means delivered free of charge on the means of conveyance; Del means delivered to receiving or distribution points, less transportation and other costs from shipping point.

COLONY, HONEY PLANT AND MARKET CONDITIONS DURING FEBRUARY

CALIFORNIA POINTS

Rain and fog curtailed bee activity in many sections during February. However, one week of clear, warm weather provided a good chance for pollinating almonds, which were at or near full bloom in most areas. Moderate rains, in most areas since mid-November, have generally been well spaced for excellent plant growth. Honey stores were mostly adequate, though some weak colonies and apiaries were reported. Supplemental feeding was widespread to prevent starvation and to encourage brood rearing. Pollen supplies were generally adequate, with new pollen coming in at all areas. Brood rearing was active with reports of up to eight frames of brood by the end of the month.

Movement of colonies to almonds was hampered by muddy conditions. The continued rains will further complicate removal of colonies from almonds and make placement in sage, buckwheat, or other locations difficult.

Bees were working almonds, apricots, filaree, cottonwood, fiddleneck, mustard, off-bloom citrus, avocado, some eucalyptus, chickweed, shepherds purse, manzanita, buckthorn, acacia, lilac (ceanothus), and other wild flowers for pollen and/or nectar.

Rentals for almond pollination ranged widely, depending upon the area and individual contracts. Rental fees were

CALIFORNIA POINTS (Continued)

reported from a low of \$4.00 to a high of \$10.00, but mostly within the range of \$5.00-7.50 per colony. The demand for bees was very active due to extensive new plantings of almonds.

Honey plant conditions were reported above normal throughout the State. Prospects are good for flows from sage, buckwheat, and other non-irrigated plants. Irrigation water supplies should be more than ample.

NORTH PACIFIC STATES

Oregon - Honey trading was slow due to some price resistance from retailers. Offering of honey continued light. Prices were mostly unchanged.

Colonies were in good condition. Mild temperatures allowed some early brood development and beekeepers anticipate strong colonies earlier than usual this spring.

<u>Washington</u> - Beekeepers reported a good demand for the light supply of honey. Prices were steady.

Colonies were in good condition. Bee population was moderate and stores were ample in most yards. Bees worked maples and a few other early plants. Supplemental feeding of sugar syrup or honey was reported in some areas. Some bees were removed from hive due to pesticide kill.

NORTH PACIFIC STATES (Continued)

Washington - (Continued) Honey plants were in good condition. Soil moisture was normal except, west of Cascades, rainfall was several inches below normal. Honey plants were dormant.

INTERMOUNTAIN STATES

<u>Colorado</u> - Offerings of honey were light. The demand was good and prices unchanged.

The condition of colonies was variable. Some colonies were in poor condition while others were about normal. Bee population ranged from light to moderate. Stores were light in most colonies, although ample stores were reported in some areas. Bees were dormant. Some supplemental feeding was necessary.

 ${\rm \underline{Idaho}}$ - Beekeepers had sold practically all honey. The demand was very good for limited offering and prices were

slightly higher.

General colony conditions were average Bee population was moderate and stores were ample. Bees were dormant. No supplemental feeding was reported.

Honey plants were in good condition with soil moisture normal.

Montana - The demand was good for the light offerings of honey. Prices were steady.

General colony conditions were about average. Bee population was light to moderate. Stores were ample in some yards and light in others. Beekeepers reported supplemental feeding of dry sugar or honey.

Honey plants were in good condition

with soil moisture normal.

<u>Utah</u> - No report was made on colony conditions, although some beekeepers were concerned about possible damage from the prolong cold weather.

Honey plant conditions were poor with

soil moisture below normal.

SOUTHWESTERN STATES

Arizona - No honey market conditions were reported because beekeepers had sold all honey.

Colonies were in good condition. Bee populations were heavy and stores were building up. Bees worked wild flowers.

Honey plant conditions were very good.

Soil moisture was above normal.

Oklahoma - Offerings of honey were light. Many beekeepers had finished selling honey. The demand was fairly good and prices were unchanged in most areas.

Colony conditions were average with moderate bee populations and ample stores.

Bees were dormant.

Honey plants were in very good condition with soil moisture above normal. Elm and maple trees were beginning to bud.

 $\underline{\text{Texas}}$ - Offerings of honey were light. The demand exceeded the supply in most areas of the State. Prices were slightly higher.

SOUTHWESTERN STATES (Continued)

Texas - (Continued) Colony conditions were good. Bee populations ranged from moderate to heavy and stores were ample in most yards. Some beekeepers reported supplemental feeding of sugar. In the southern portion of the State, bees worked some wild flowers.

Honey plant conditions were very good. Soil moisture was above normal.

PLAINS STATES

<u>Iowa</u> - Offerings of honey were light.
The demand was good and prices were steady.

Colony conditions were fairly good. Bee population was moderate and stores were ample in some yards and light in others. A few beekeepers had not checked colonies due to cold weather.

Honey plant conditions were good with

soil moisture above normal.

<u>Kansas</u> - A good demand was reported for the light offerings of honey. Prices were steady.

Colony conditions were average. Bee population was moderate. Stores were inlight in some areas and ample in others. Bees were dormant.

Honey plants were in good condition with soil moisture above normal. Plants had not started to bloom. Maple trees will probably be the first source for nectar and pollen, and were expected to bloom in early March.

Missouri - The demand was good for

honey and prices were steady.

Colonies were in good condition. Bee population was moderate and stores were ample.

Honey plants were in very good condition with soil moisture above normal.

Nebraska - Offerings of honey were light. Demand was good. Prices were slightly higher.

Colony conditions were variable. Bee populations ranged from light to moderate. Cold, wet fields hampered feeding in some yards. Colonies were depleting food stores rapidly. Some areas reported heavy bee losses.

Honey plants were in good condition with the soil moisture above normal. Plants were dormant.

North Dakota - Offerings of honey were light. The demand exceeded the supply and prices were slightly higher.

Colonies were in average condition. Bee populations were moderate and stores ample. Bees were dormant.

Honey plants were in good condition with soil moisture normal.

CENTRAL STATES

<u>Illinois</u> - The demand exceed the supply for the light offerings of honey. Prices were unchanged.

Colony conditions were average. Bee population was moderate and stores were light. Some supplemental feeding of sugar was reported.

CENTRAL STATES (Continued)

Illinois (Continued) Honey plants were in good condition with soil moisture above normal.

<u>Indiana</u> - Most beekeepers had sold

honey.

Colony conditions were good. Bee population was moderate and stores were ample. Bees were dormant, although a few cleansing flights were reported.

Honey plants were in good condition with soil moisture above normal. Honey

plants were dormant.

Michigan - Offerings of honey were light. The demand exceeded the supply and the market was slightly higher.

Colony conditions were good. Bee population was moderate. Stores were light. Some supplemental feeding was necessary.

Honey plants were in good condition with soil moisture above normal.

Minnesota - Offerings of honey were light. The demand was good and prices were

slightly higher.

Most colonies were in average condition. Bee population was moderate and stores ranged from light to ample. Bees were dormant. Some supplemental feeding of sugar was reported. Mild weather permitted bees to make several cleansing flights in the southern portion of the State.

Honey plants were in good condition, although dormant. Soil moisture was above normal.

Ohio - Offerings of honey were light. The demand was good and the market steady.

General colony conditions were good. Bee population was moderate. Stores were light. Supplemental feeding of sugar syrup, cakes and pollen were reported. Mild temperatures permitted bees to make several cleansing flights.

Honey plants were in good condition

with soil moisture normal.

<u>Wisconsin</u> - Offerings of honey were light. The demand was good and the market

unchanged.

Colony conditions were average. Bee population was moderate. Stores ranged from light to ample. Bees were dormant. Bees were able to make several cleansing flights. Some supplemental feeding was necessary.

Honey plants were in good condition with soil moisture normal to above normal.

NORTHEASTERN STATES

Connecticut - Colonies were in good conditions. Bee populations were moderate and stores ample. Bees were dormant.

Honey plants were in good condition, although dormant. Soil moisture was normal

<u>Massachusetts</u> - General colony conditions were average. Bee populations were light and stores ample. Mild temperatures permitted bees to make several cleansing flights.

NORTHEASTERN STATES (Continued)

Massachusetts (Continued) Honey plants were in good condition with soil moisture above normal. Honey plants were still dormant.

New Jersey - Offerings of honey were light. The demand was good and prices were steady.

Colonies were in good condition. Bee populations ranged from moderate to heavy. Stores were light. Beekeepers reported supplemental feeding of sugar. Mild temperatures caused brood rearing to get underway early. The remaining light stores were being used rapidly.

Honey plant conditions were very good.

Soil moisture was above normal.

New York - Offerings of honey were light. The demand was good and the market steady.

Colony conditions ranged from average to good. Bee populations were moderate and stores ample in most yards. Some supplemental feeding was necessary.

Honey plants were in good condition with soil moisture ranging from normal to above normal. Honey plants continued in dormant stage.

Pennsylvania - Offerings of honey were light. The demand was good and the market steady.

Colonies were in good condition. Bee populations were moderate and stores generally ample.

Honey plants were in very good condition with the soil moisture above normal in most areas.

SOUTH ATLANTIC STATES

Kentucky - Offerings of honey were very light. The demand was good and prices were unchanged.

The condition of colonies varied from poor to good. Bee populations ranged from light to moderate, while stores were generally light. Mild temperatures permitted bees to make a few cleansing flights. Winter bee loss ranged from light to moderate. Some supplemental feeding of sugar syrup of honey was necessary.

Honey plants were in good condition with soil moisture normal in most areas.

Maryland - Offerings of honey were light. The demand was good and the market steady.

Colony conditions were average. Bee populations were moderate and stores ample. Colonies had a few cleansing flights during February.

Honey plants were in good condition, although dormant. Soil moisture was normal.

 $\frac{\text{Tennessee}}{\text{light.}} \ \, \frac{\text{The demand was good and the market}}{\text{steady.}}$

General colony conditions were average. Bee populations ranged from light to moderate. Stores were generally light. Bees were beginning to work maple. Some supplemental feeding of sugar syrup was reported.

SOUTH ATLANTIC STATES (Continued)

Tennessee (Continued) Honey plants were in very good condition with the soil moisture above normal.

Virginia - Beekeepers had sold all of honey.

Colonies were in good condition. Bee populations were moderate and stores ample. Central and North Georgia, while heavy Some supplemental feeding of sugar syrup, or cakes was reported, although maple was beginning to bloom and bees collected pollen on mild days. Most honey plants were dormant, although in good condition. Soil moisture was above . normal.

SOUTHEASTERN STATES

12,

1-1b.

Jars

Florida - Offerings of honey were light. The demand was good and the market | Beeswax prices were unchanged. slightly higher.

General colony conditions were fairly good. Bee populations were moderate. Stores were building up. Bees were working wild flowers and Titi.

Honey plants were in good conditions. Soil moisture was normal.

SOUTHEASTERN STATES (Continued)

Georgia - The weather was rather cool during February. A heavy snow occurred over much of the State the second week of February. This was very unusual.

Bees were in fair condition in feeding was necessary in South Georgia. Brood rearing was rather slow account of pollen shortage. Bees were working Red Bud Maple and a few hedges, Hollyhock, Honeysuckle and wild mixed flowers in South Georgia. Spring Titi in South Georgia is expected to start to bloom the second week in March.

Beekeepers had sold all honey.

TERMINAL MARKET REPORTS

Market prices (sales or quotations ad indicated under each city) shown below were obtained from local brokers, packagers, wholesalers and other receivers in the respective cities. Current quotations are shown for markets where sales for the period could not be obtained. Sales are usually subject to a one percent (1%) discount if payment is made within 10 days. Comments on market conditions reflect the opinion of the local trade for month of February. Sixty pound cans are on a per pound basis and smaller units of honey are on a per case basis unless otherwise stated: Beeswax prices are per pound.

MONTHLY REPORT

UNITED STATES DEPARTMENT OF AGRICULTURE

2503 S. Agriculture Bldg., Washington, D.C. 20250 Fruit and Vegetable Division

Vol. LVII No. 3

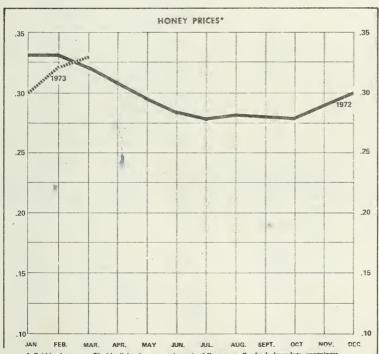

Wednesday, April 11, 1973

MARCH HIGHLIGHTS

Temperatures were above normal in most states during March. Honey plants made rapid growth. Bees were able to make many flights and brood rearing was active in many sections.

Honey plants made excellent progress in most states. Moisture was above normal in most areas. Honey flow was reported in a few southern and south western states.

Beekeepers had sold practically all of old crop honey. New crop was not ready. Prices were steady, or slightly higher, in most states.

* Paid beekeepers - Florida, light citrus or amber mixed flower, per lb., f.o.b. large lots, containers exchanged. No prices reported April and September 1972 or January 1973.

U. S. DEPARTMENT OF AGRICULTURE

FRUIT AND VEGETABLE DIVISION - AMS

Mational Agricultural Library Bso Culture Branch, Bldg. A Agricultural Research Center Beltsville, Maryland 20702 mid. 4/1/73-af

HONEY PRICE REPORTED DURING MARCH

Prices represent sales reported by correspondent beekeepers and honey handlers. Because of the many thousands of beekeepers and handlers in the country, prices should be considered as representative and not as complete coverage of transactions for any State or areas.

FOOTNOTES FOR PAGES 1-4

1/State or origin indicates where packed, not necessarily where produced. The term
"clover" includes most legumes such as white dutch clover, yellow, white sweet clover and occasionally such legumes as alfalfa and vetch mixed with other clover 2/ Containers exchanged. 3/ Containers included.

NOTE: F.o.b. as used means delivered free of charge on the means of conveyance; Del means delivered to receiving or distribution points, less transportation and other costs from shipping points.

CALIFORNIA POINTS

Colony conditions at the end of March were generally very good throughout the State. Some feeding has been necessary to prevent starvation, but most feeding was to stimulate brood rearing. Honey and condition. Bee population was moderate pollen supplies were mostly adequate, though continued below normal temperatures and wet weather were cutting into the stores. Brood rearing was active and most and various wild flowers. Brood rearing beekeepers reported good populations of young bees. Colonies are expected to be in good condition for upcoming major honey although additional soil moisture was flows, including sage and citrus.

Swarming was just beginning in most areas. So far, swarming has not become a problem. Winter and spring losses vary widely, ranging from nominal to 15-20 percent. Without feeding, a few yards are were steady. still faced with possible starvation.

Movement from almonds to cherries, pears, plums, sage, citrus, and to holding population and stores were light. Supplekept bees in almonds after the bloom had Bees were able to gather some pollen from been completed, due to the good cover crop. elm trees.

Almond pollination rental activity was very active. Rental fees ranged widely condition, although most were dormant. from \$4.00-10.00, depending upon the area, Soil moisture was normal. strength of colonies, and concentration of colonies, but in most sections ranged \$6.00-7.50 per colony. In addition to almonds, bees were rented for pollination of pears at \$4.00 per colony; prunes \$4.00 condition. Bee population was moderate, per colony; plums \$4.00-6.50; and cherries although stores were light. Supplemental \$3.50-4.00 per colony. The first alfalfa seed pollination contracts of the season were being signed. Early contracts were around \$7.00-7.50 per colony.

Pears, prunes, plums, mustard, radish, a normal brood. shepherds purse, manzanita, ceanothus, cherries, filaree, wild radish, mustard, wine cups, fiddleneck, mesquite, tamarisk, and many other wild plants were being worked for nectar and pollen. Honey plants were generally showing excellent growth but warm weather was needed to produce a nectar flow. However, prunes in the northern San Joaquin Valley were reported producing an excellent flow. Ground moisture conditions are excellent throughout the State. Current prospects are reported excellent for a good honey flow.

NORTH PACIFIC STATES

Oregon - Honey prices were slightly higher, although movement continued slow. Some price resistance was reported from retailers.

Colony conditions ranged from poor to average. The warm temperatures caused rapid brood development. Heavy swarming is expected. Some feeding was reported.

Honey plants were in good condition. Pollen sources included ornamental cherry, plum, and quince. Some hives were being moved to cherry orchards. Vetch plantings were in good condition. Soil moisture was about normal.

NORTH PACIFIC STATES (Continued)

Washington - Offerings of honey were light. The demand was good and the market steady.

Most colonies were in fairly good and stores were ample. Mild temperatures enabled bees to make numerous flights. Bees gathered nectar from pussy willow was active.

Honey plants were in good condition, needed in some areas.

INTERMOUNTAIN STATES

Colorado - Beekeepers had sold most of honey. The demand was good and prices

The condition of colonies varied, although most were in poor condition. areas had been completed. Some beekeepers mental feeding was necessary in most yards.

Honey plants were in generally good

Idaho - Offerings of honey were very light. The demand exceeded the supply. Prices were higher.

Most colonies were in fairly good feeding of sugar syrup or cakes was reported. The continued cold weather caused bees to consume more honey than during an average year. Beekeepers reported about half of

Honey plants were in good condition with soil moisture about normal at most locations.

Montana - Beekeepers had sold practically all honey. No prices were reported.

Colonies were in fairly good condition. Bee population ranged from moderate to heavy. Stores were light. Some feeding was necessary.

Honey plants were in poor condition in most areas due to below normal soil moisture.

Nevada - Beekeepers had sold all honey. No prices were reported.

Colony conditions were about average for this time of year. Bee population and stores were light. Bees were working a few wild flowers, although supplemental feeding continued in most yards.

Honey plants were in very good condition with soil moisture above normal in most areas.

Utah - General colony conditions were below average. Bee populations ranged from light to moderate. Stores were light. Supplemental feeding of sugar syrup, cakes, comb honey and pollen cake was reported.

INTERMOUNTAIN STATES (Continued)

Utah - (Continued) Colony losses were heavy in some areas. The lack of fall brood rearing, long periods of subzero weather, and starvation are some of zero weather, and starvation are some of <u>Kansas</u> - Offerings of honey were the causes for bee loss. The lack of new moderate. The demand was good and prices pollen has prevented normal colony buildup at this time of year. Honey plants were in good condition with soil moisture population was moderate and stores were above normal.

Wyoming - Beekeepers had sold practically all honey. No prices were reported.

Colonies were in fairly good condition. Bee population was moderate. Stores were light. Mild temperatures permitted bees to make several cleansing flights, although no nectar or pollen was available. A few yards reported supplemental feeding of dry sugar and honey comb.

Honey plants were only in fair condition due to soil moisture being belowThe low temperatures did not permit bees normal in most areas.

SOUTHWESTERN STATES

Arizona - Supply of honey was insufficient to quote.

Colonies were in good condition. Bee population was heavy and stores were building up. Bees were working wild flowers and citrus.

Honey plants were in very good condition and soil moisture above normal.

Oklahoma - Offerings of honey were light. The demand was fairly good and prices generally unchanged.

General colony conditions were about average. Bee populations were moderate and stores were ample in most yards. Bees were working some wild flowers, orchard blooms and dandelions. Vetch and clover are growing nicely and about one inch high.

Honey plants were in good condition with soil moisture ranging from normal to above normal.

Texas - Beekeepers had sold practically all honey. No prices were reported. Colonies were in fairly good condition. Bee population was moderate in most colonies. Stores were light. Bees were working citrus and wild flowers High winds and excessive rain hindered pollen gathering in several areas. Brood rearing was exceptionally heavy in most colonies. This could cause swarming problems.

Honey plants were in good condition with soil moisture above normal.

PLAINS STATES

Iowa - No honey market conditions were reported.

population was moderate. Stores were light. Bees were dormant. Some supplemental feeding was necessary.

PLAINS STATES (Continued)

Iowa (Continued) Honey plants were dormant, although apparently in fairly good condition. Soil moisture was normal.

were slightly higher.

Colony conditions were good. Bee ample in most yards. Bees were working maple, elm and willow.

Honey plants were in very good condition with soil moisture above normal.

Nebraska - Offerings of honey were light. The demand exceeded the supply at steady prices.

The condition of colonies was variable. Some were in fairly good condition while others were poor. Bee population was moderate and stores were light in most yards. Heavy bee losses were reported in some areas due to the long cold winter. to make timely cleansing flights or move to stores within hive. Many beekeepers reported a shortage of queens and package bees from the south.

Honey plants were in very good condition with soil moisture above normal.

South Dakota - Offerings of honey were very light. The demand exceeded the supply at steady prices.

Colonies were in good condition. Bee population was heavy and stores were light. Bees were dormant. Some supplemental feeding of sugar syrup, or cakes was necessary. Winter bee loss was below normal. Honey plants were in good condition with soil moisture above normal.

CENTRAL . STATES

<u>Illinois</u> - Offerings of honey were very light. Demand exceeded the supply at steady prices.

Colonies were in fairly good condition with bee population moderate. Stores were light. Some supplemental feeding of dry sugar was necessary. Northern Illinois beekeepers reported heavy winter losses of

Honey plants were in good condition with the soil moisture above normal.

Indiana - Offerings of honey were very light. The demand was good and prices were slightly higher.

General colony conditions were fairly good. Bee population was moderate. Stores were very light in most yards. Heavy feeding was reported. Bee loss was heavy due to starvation. Brood rearing was much above normal due to the very mild winter. Excessive soil moisture caused many problems in bee yards. Bees were working willow, elm and maple for pollen. The Colonies were in good condition. Bees now storm on March 17-18 reduced pollen sources which slowed brood rearing.

CENTRAL STATES (Continued)

Michigan - Offerings of honey were light. The demand was good at slightly higher prices.

General colony conditions were about average. Bee populations ranged from moderate to heavy. Stores were light in most yards. Some supplemental feeding was necessary.

Honey plants were dormant in most areas. Soil moisture was above normal.

Minnesota - Offerings of honey were light. Demand was good and the market steady.

General colony conditions were about average. Bee population was moderate. Stores were light in most yards, although was beginning to build up in a few locations. Some supplemental feeding of dry sugar or honey comb continued. Bee loss was reported light in yards where bees were properly feed. Bees were beginning to gather pollen from elm and maple trees.

Honey plants were in good condition with soil moisture above normal. April trees were just beginning to produce pollen

Ohio - Offerings of honey were very light. The demand was good. Prices were slightly higher.

General colony conditions were fairly good. Bee population was moderate. Stores were light. Some supplemental feeding of dry sugar or syrup was still necessary. Bees were working maple and a few other trees for pollen. Winter bee loss was generally light.

Honey plants were in good condition with soil moisture above normal.

<u>Wisconsin</u> - Offerings of honey were light. The demand was good and prices were unchanged in most areas.

Most colonies were in fairly good condition. Bee population ranged from light to moderate. Stores were light in most areas. Some supplemental feeding was necessary. Bee loss ranged from light to moderate. Bees worked maple trees for pollen. Brood rearing was active, and probably the heaviest on record for this time of year.

Honey plants were in very good condition with soil moisture above normal.

NORTHEASTERN STATES

Connecticut - Offerings of honey were light. The demand was good and prices steady.

Colonies were in good condition. Bees population was moderate. Stores were light. Bees made a few cleansing flights.

Honey plants were in good condition, although still dormant. Soil moisture was normal.

Massachusetts - Practically all honey had been sold. The demand was fair at steady prices.

Colonies were in good condition. Bee population was moderate. Stores were ample

NORTHEASTERN STATES (Continued)

Massachusetts (Continued)in most yards. Bees worked some pussy willow. Supplemental feeding of pollen substitute and sugar were necessary in some yards.

Honey plants were in good condition. Above normal temperatures helped spring flowers to develop early. Many pollen sources were expected available in near future. Soil moisture ranged from normal to above normal.

New Jersey - Offerings of honey were light. The demand exceeded the supply at slightly higher prices.

Colonies were in good condition. Bee population was heavy and stores were beginning to build up. Many beekeepers were still feeding colonies, due to heavy brood rearing. Prospects were good for a early honey flow. Bees were working maple for pollen.

Honey plants were in good condition with soil moisture above normal.

New York - Offerings of honey were very light. The demand was slow and prices were steady.

Most colonies were in fairly good condition. Bee populations ranged from moderate to heavy. Stores were ample in most yards. Some supplemental feeding continued. Bees were working maple and willow trees for pollen.

Honey plants were in very good condition with the soil moisture above normal.

Pennsylvania - Offerings of honey were very light. The demand was good and prices were steady.

Some colonies were in fairly good conditions while others were in poor condition. Bee population ranged from light to heavy. Stores were ample in some yards and light in others. Winter bee losses were heavy in some locations. Supplemental feeding continued in some yards. Mild temperatures permitted bees to make several cleansing flights and gather pollen from maple trees.

Honey plants were in fairly good condition with soil moisture above normal.

SOUTH ATLANTIC STATES

Kentucky - Offerings of honey were very light. The demand was good and prices were steady.

Condition of colonies varied. Most colonies were in average condition. Bee populations ranged from light to moderate. Stores were light in most yards. Bees were working maple and oak trees for pollen. Brood development was rapid. Bees worked dandelions, sugar maples, fruit blooms and red buds for nectar.

Honey plants were in good condition with soil moisture above normal in most areas.

SOUTH ATLANTIC STATES (Continued)

Maryland - Offerings of honey were light. The demand was fair and prices steady.

Colonies were in good condition with bee population moderate. Stores were ample. Bees were working several type trees for pollen.

Honey plants were in good condition with soil moisture about normal.

Tennessee - Offerings of honey were light. The demand was good and prices were steady.

Colonies were in fairly good condition. Bee population was moderate and stores were light. Some supplemental feeding continued. Bees were working dandelion, wild flowers and fruit blooms. Rainy, cloudy weather hampered flights.

Honey plants were in good condition with soil moisture ranging from normal to above normal.

Virginia - Offerings of honey were very light. The demand was good and the market was slightly higher.

Colony conditions were fairly good. Bee populations ranged from moderate to heavy. Stores were light. Bees were working willows, maple and fruit trees.

Honey plants were in good condition with soil moisture above normal.

SOUTHEASTERN STATES

Florida - Offerings of honey were moderate. Demand was good and the market slightly higher.

Colonies were in good condition. Bee population was heavy and stores were ample. Bees worked wild flowers and citrus. The citrus flow was in progress and appeared about average. Citrus flow was expected to end around April 10.

Honey plants were in good condition with soil moisture normal.

Georgia - March weather was cool with far above normal rainfall reported in South Georgia.

Colonies were only in fair condition. Feeding was necessary in South Georgia. The spring titi flow was over, and was reported very poor. Central and North Georgia colonies were just making a . living on red bud maple, privet hedges and mixed wild flowers.

No honey was available at beekeeper level. The demand for package and queen bee was heavy. Beeswax prices were higher with light dark selling at 72-78 cents per pound.

Cut Comb

8-oz.

6.05

TERMINAL MARKET REPORTS

Market prices (sales or quotations as indicated under each city) shown below were obtained from local brokers, packagers, wholesalers and other receivers in the respective cities. Current quotations are shown for markets where sales for the period could not be obtained. Sales are usually subject to a one percent (1%) discount if payment is made within 10 days. Comments on market conditions reflect the opinion of the local trade for the month of March. Sixty pound cans are on a per pound basis and smaller units of honey are on a per case basis unless otherwise stated: Beeswax prices are per pound.

APRIL HIGHLIGHTS

Honey prices edged higher in several States. Offerings continued light and the demand was good.

Rainy, cloudy weather hampered bee activity. Late feeding was necessary in some areas.

Honey plants were in good condition. Soil moisture was above normal in most States. Some cold damage was reported April 11-13 in several Midwestern and northeastern States.

مراحيات والمعراب والمعراب

Prices represent sales reported by correspondent beekeepers and honey handlers. Because of the many thousands of beekeepers and handlers in the country, prices should be considered as representative and not as complete coverage of transactions for any State or areas.

FOOTNOTES FOR PAGES 1-4

^{1/} State or origin indicates where packed, not necessarily where produced. The term
"clover" includes most legumes such as white dutch clover, yellow, white sweet clover
and occasionally such legumes as alfalfa and vetch mixed with other clover.
2/ Containers exchanged. 3/ Containers included.

NOTE: F.o.b. as used means delivered free of charge on the means of conveyance;
Del means delivered to receiving or distribution points, less transportation
and other costs from shipping points.

CALIFORNIA POINTS

Colony conditions were mostly good to excellent, with a few exceptions. Package bee shipping is about over and with the heavy demand from Canada and Northern U.S. shook colonies had become fairly light. Some beekeepers reported colonies were recovering from spray damage. Swarming ranged from very light in the packaged bee area, to normal or above elsewhere. Some surplus honey was being produced in a number of areas.

Movement of colonies was heavy during April. Most of the movement was away from pollination areas, to sage, citrus, and summer locations. During April, bees were rented for pollination of prunes, pears, and cherries at \$4.00 and up per colony; and contracted for alfalfa and melons at \$6.50-7.50 per colony.

Bees were working vetch, mustard, wild radish, wild onions, cascara, filaree, shepherds purse, red bud, amsinckia, sage, citrus, clover, and various wild flowers for nectar and pollen. Some apple, prune, and mixed flower honey has been extracted, but very little new crop honey was available.

NORTH PACIFIC STATES

Oregon - Offerings of honey were light. The demand was good and prices were steady.

General colony conditions were average. Bee populations were moderate and stores were building up. Bees were working wild flowers and fruit tree blooms. Warm weather caused rapid brood development. Swarming was heavy. Limited supplemental feeding was reported in a few areas.

Honey plants were in very good condition with soil moisture normal. Vetch acreage was reported light this year. Crimson clover appeared to be on schedule, a few early blooms were showing the last week of April. White clover appeared to be a little early.

Washington - Offerings of honey were light. The demand was good, although some producers reported slightly lower prices.

Colonies were in good condition. Bee populations were moderate and stores ample. Most colonies had been removed from the lower Yakima Valley orchards. Cold, wet weather limited flights several days in the northwest portion of the State.

Honey plants were in good condition with soil moisture ranging from below normal to normal.

INTERMOUNTAIN STATES

Colorado - Offerings of honey were light. The demand exceeded the supply at slightly higher prices.

General colony conditions were average. Bee population was light. Stores were light in most areas. Some supplemental feeding of dry sugar was reported.

INTERMOUNTAIN STATES (Continued) COLORADO Heavy winter losses were reported in northwestern Colorado. Beekeepers reported package bees were hard to get.

Iowa - A good demand was reported
for the light offerings of honey. Prices
were steady.

General colony conditions were below normal. Bee population was moderate and stores were light. Supplemental feeding was necessary. Honey producers reported clover acreage as very light.

Honey plants were in good condition with soil moisture above normal.

Montana - Offerings of honey were light. The demand was good and the market steady.

Colonies were in fairly good condition. Bee population ranged from moderate to heavy. Stores continued to build up. Bees were working mostly wild flowers. Honey plants were in good condition in most areas of the State with soil moisture normal.

Utah - Beekeepers had sold all honey. Colonies were in poor condition in some areas and fair in others. Winter bee loss was heavy in some areas and light in others. Supplemental feeding was necessary in most yards.

Honey plants were in good condition. Soil moisture was normal at most locations.

Wyoming - Offerings of honey were light. The demand was fair and the market steady.

Most colonies were in average condition. Bee population was moderate. Stores were light. Bees were working wild flowers for pollen.

Honey plants were in good condition with soil moisture slightly below normal. Recent rains were beneficial.

SOUTHWESTERN STATES

Arizona - Offerings of honey were light. The demand exceeded the supply at slightly higher prices.

Colonies were in good condition.
Bee population was heavy and stores were ample. Bees were working wild flowers and citrus trees. Honey plants were in good condition with soil moisture normal.

Oklahoma - Offerings of honey were light. The demand was very good and the market slightly stronger.

Colonies were in fairly good condition. Bee population was moderate and stores ranged from light to moderate. Bees were working wild flowers.

Honey plants were in good condition with soil moisture above normal in most areas.

Texas - Offerings of honey were moderate. The demand was good and the amarket steady.

Colonies were in fairly good condition. Bee populations ranged from light to heavy. Bees were working some wild flowers.

SOUTHWESTERN STATES (Continued)

TEXAS (Continued) Supplemental feeding of sugar syrup, or cakes, was reported very light. The demand exceeded the in some yards. Although vetch and crimson supply and the market was slightly higher. clover were in full bloom in some areas. continuing rains prevented bees from making a living.

Honey plants were in very good condition with soil moisture above normal.

PLAINS STATES

Kansas - Offerings of honey were light. The demand was good and the market slightly stronger.

Colonies were in fairly good condition. Bee population was moderate. Stores were light. Bees were working wild flowers, although flying was hampered by rainy weather.

Honey plants were in good condition with soil moisture above normal.

Nebraska - Offerings of honey were very light. The demand exceeded the supply and the market was slightly stronger.

Most colonies were in fairly good condition. Bee population was moderate. Stores were light. Winter bee losses ranged from light to moderate. Supplemental feeding was necessary in a few areas. Bees were in need of warm, sunny days to take advantage of the early dandelion flow.

Honey plants were in good condition with soil moisture above normal.

North Dakota - Offerings of honey were light. The demand exceeded the supply and the market was slightly higher.

Colonies were in fairly good condition. Bee population was moderate and stores were light. Bees were being fed sugar syrup or cakes.

Honey plants were in good condition with soil moisture normal.

<u>South Dakota</u> - Offerings of honey were very light. The demand was good and the market steady.

Colonies were in good condition. Bee population was heavy. Stores were light. Bees were working dandelions. Some supplemental feeding was necessary.

Honey plants were in good condition with soil moisture ranging from normal to above normal.

CENTRAL STATES

Illinois - Practically all honey had been sold. The demand exceeded the supply and prices were steady.

Colonies were in fairly good condition. Bee population was moderate to heavy. Stores were light. Bees were working wild flowers and various tree buds Some supplemental feeding of sugar syrup or dry sugar was necessary.

Honey plants were in good condition with soil moisture above normal.

CENTRAL STATES (Continued)

Colonies were in fairly good condition. Bee population was fairly heavy. Stores were building up. Bees were working wild flowers, dandelions and fruit bloom.

Honey plants were in good condition with soil moisture ranging from normal to above normal.

Michigan - Offerings of honey were very light. The demand was good and the market about steady.

Colonies were in average condition. Bee population was moderate and stores were light. Bees were working dandelion and fruit bloom. Some supplemental feeding was necessary.

Honey plants were in good condition with soil moisture above normal.

Minnesota - Offerings of honey were light. The demand was good and the market was about steady.

Colonies were in good condition. Bee population was moderate to heavy. Stores were building up. Bees were working wild flowers and some maple, willow and elm trees. Some supplemental feeding continued. Heavy winter bee losses were reported in some areas. One beekeeper reported packaged bees were almost impossible to get.

Ohio - The demand was good for the light offerings of honey. The market was steady.

Colonies were in fairly good condition. Bee population was moderate to heavy. Stores were light. Bees were working wild flowers and dandelions. Some supplemental feeding continued.

Honey plants were in good condition with soil moisture above normal in most areas.

Wisconsin - Offerings of honey were light. The demand was fairly good and the market steady.

Most colonies were in fairly good condition. Bee population was moderate. Stores were light but building up. Bees were working dandelion, fruit, willow and elm trees.

Honey plants were in very good condition with soil moisture above normal.

NORTHEASTERN STATES

Massachusetts - Offerings of honey were light. The demand was fair and the market steady.

Colonies were in good condition. Bee population was moderate and stores were building up. Bees were working wild flowers, and various fruit and other type trees. Some supplemental feeding of sugar syrup, or cakes was reported.

Honey plants were in good condition with soil moisture above normal in most areas.

NORTHEASTERN STATES (Continued)

New Jersey - Offerings of honey were very light. The demand exceeded the supply at slightly higher prices.

Colonies were in fairly good condition. Bee population was heavy and stores were building up. Bees were working wild flowers and blueberries.

Honey plants were in good condition and soil moisture was above normal in most areas.

New York - Offerings of honey were light. The demand was good and the market about steady.

Colonies were in fairly good condition. Bee populations were moderate and stores were building up. Rains and cloudy skies hampered bee flights on several days. Bees were working wild flowers.

Honey plants were in good condition.

Soil moisture was above normal.

Pennsylvania - Honey prices were unchanged. A good demand prevailed for the light offerings of honey.

Colonies were in good condition. Bee populations were moderate. Stores were light in some yards and ample in others. Bees were working wild flowers and dandelion Supplemental feeding was still necessary in a few yards.

Honey plants were in good condition with soil moisture normal at most locations.

Vermont - Offerings of honey were very light. The demand exceeded the supply and the market was higher.

Colonies were in fairly good condition. Bee population was moderate and stores were ample. Bees were working elm and maple blossoms. Honey plants were in good condition with soil moisture normal.

SOUTH ATLANTIC STATES

Kentucky - Offerings of honey were very light. The demand was good and the market steady.

Most colonies were in fairly good condition. Bee populations ranged from light to moderate. Stores were light. Excessive rains hampered bee activity. A freeze on April 11, killed most of the tulip popular buds. Nectar build up was very light, but pollen was sufficient in most yards. Considerable feeding of syrup was necessary. Swarming was a problem in some areas. Bees worked dandelions and wild flowers.

Honey plants were in good condition with the soil moisture above normal in most areas. Prospects were fairly good for a normal clover flow.

Maryland - Offerings of honey were light. The demand was good and the market

Colonies were in good condition. Bee population was moderate and stores were ample in most yards. Bees were working wild flowers.

Honey plants were in good condition with soil moisture normal.

SOUTH ATLANTIC STATES (Continued)

Tennessee - Offerings of honey were very light. The demand was good and the market steady.

The condition of colonies was variable. Bee population was moderate. Stores were light. Supplemental feeding of sugar continued in many yards. Bees were working wild flowers.

Honey plants were in fair condition. Soil moisture was above normal.

Virginia - Beekeepers had sold all

Colonies were in good condition. Bee population was moderate. Stores were light. Bees worked wild flowers and were starting on tulip poplar. Rainy weather hampered bee flights.

Honey plants were in good condition with soil moisture normal.

SOUTHEASTERN STATES

Georgia - The weather during April was extremely wet and cold with periods of high winds. Woodlands and swamps continued very wet, and flooded conditions were reported in some areas.

In South Georgia, colonies were in fair to good condition, although some supplemental feeding was necessary. Some starvation was reported in North and Central Georgia. Black Gum flow was below average. Gallberries were in full bud stage and were expected to bloom within a week or so. Bees were working a few wild swamp flowers. Heavy bookings were reported for queen and packaged bees.

No prices were reported on honey. Beeswax prices were steady at 70-75 cents per pound for light and dark.

Florida - Offerings of honey were light. The demand was good and the market slightly higher.

Colonies were in fairly good condition. Bee population ranged from moderate to heavy and stores light to ample. Bees were working wild flowers. Rain hampered bee activity.

Honey plants were in good condition with soil moisture normal. Rains hampered titi flow, although tulip poplar trees looked good and were expected to start blooming soon.

Louisiana - Offerings of honey were very light. The demand was fair and the market steady.

Colonies were in good condition. Bee population was moderate. Stores were ample in most yards. Bees were working clover and wild flowers.

Honey plants were in good condition with soil moisture above normal.

WASHINGTON, March 30--Loan and purchase rates for the 1973 crop of honey will average 16.1 cents per pound, 2.1 cents more than in 1972, it was announced by the U.S. Department of Agriculture. The 1973 level represents 60.2 percent of the April 1973 adjusted parity price of 26.7 cents per pound.

The value of the 1972 honey crop is about \$65 million.

Loans and purchases will be offered on 1973-crop honey stored in bulk and other eligible containers, on or off farms. Producers may request loans through March 31, 1974. Loans will mature June 30, 1974. Producers having eligible honey not under loan who wish to offer it for purchase by Commodity Credit Corporation (CCC) need to

deliver to the applicable county Agricultural Stabilization and Conservation Service office an executed purchase agreement not later than the maturity date. This agreement must specify the approximate quantity the producer desires to sell.

The 1973-crop loan and purchase rates for extracted honey in 60-pound or larger containers, by color and class, are as follows:

Table honey	Cents per Pound
White or lighter	16.9
Extra light amber	15.9
Light amber	14.9
Other table and non-tab	le
honey	12.9

TERMINAL MARKET REPORTS

Market prices (sales or quotations as indicated under each city) shown below were obtained from local brokers, packagers, wholesalers and other receivers in the respective cities. Current quotations are shown for markets where sales for the period could not be obtained. Sales are usually subject to a one percent (1%) discount if payment is made within 10 days. Comments on market conditions reflect the opinion of the local trade for the month of April. Sixty pound cans are on a per pound basis and smaller units of honey are on a per case basis unless otherwise stated: Beeswax prices are per pound.

MONTHLY REPORT

UNITED STATES DEPARTMENT OF AGRICULTURE

AGRICULTURAL MARKETING SERVICE Fruit and Vegetable Division 2503 S. Agriculture Bldg., Washington, D.C. 20250

Vol. LVII No. 5

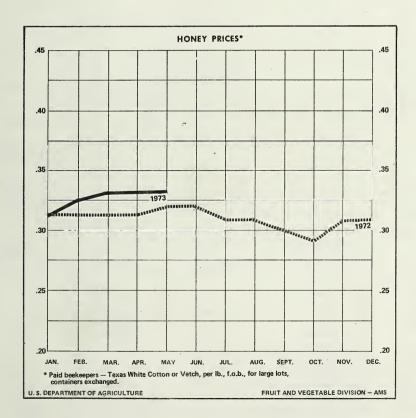

Friday, June 8, 1973

MAY HIGHLIGHTS

Rain and below normal temperatures curtailed bee activity in many states. Bees were unable to gather surplus honey in most Northeast States.

Offering of honey were light. Practically all old crop had been sold. A few South and Southwestern States were extracting new crop honey. Early new crop yields were fairly heavy in Florida and some sections of California.

Honey prices were slightly higher in several States, and unchanged in most others.

HONEY PRICE REPORTED DURING MAY

Prices represent sales reported by correspondent beekeepers and honey handlers. Because of the many thousands of beekeepers and handlers in the country, prices should be considered as representative and not as complete coverage of transactions for any State or areas.

FOOTNOTES FOR PAGES 1-4

^{1/} State or origin indicates where packed, not necessarily where produced. The term
"clover" includes most legumes such as white dutch clover, yellow, white sweet clover and occasionally such legumes as alfalfa and vetch mixed with other clover.

2/ Containers exchanged.

3/ Containers included.

NOTE: F.o.b. as used means delivered free of charge on the means of conveyance;

Del means delivered to receiving or distribution points, less transportation and other costs from shipping points.

CALIFORNIA POINTS

Colony conditions were good to excellent. Colonies used for shaking and queen rearing are regaining strength. Colonies in honey production produced well on citrus, and generally made excellent gains on sage. Pollen supplies are ample and most beekeepers report an abundance of brood in all states and large populations of young bees.

Swarming has been normal to above normal. In some desert locations, swarming all but destroyed some colonies. However, swarming is now over in most sections. Removal of colonies from citrus was virtually completed and some movement from early sage locations had started. In other areas, colonies are being moved to late sage, buckwheat, and alfalfa and clover seed, and other pollination locations has started. With good sage flows, many beekeepers are reluctant to move to pollination locations until absolutely necessary.

Star thistle, clover, sage, alfalfa, trefoil, wild radish, some late citrus, buckeye, buckwheat, a little eucalyptus, birdsfoot, tarweed, salt cedar, and various other wild flowers are being worked for nectar and some pollen.

Honey plant conditions are quite variable. North Winds hurt many non-irrigated Central Valley plants but irrigated areas are doing well. Higher elevations are in good condition due to the excellent winter rainfall. Sage in the Southern Coastal area has had excellent at most locations. growth and secondary spurs will extend the flow. Southern Coastal area has been sold. No

Some colonies in sage are 5-6 stories high, most are 4 stories, and beekeepers are running out of supers. New supers are reported difficult to obtain in some areas due to the shortage of lumber.

Extracting of new crop honey is getting underway. In most cases, beekeepers report the new crop to be of excellent quality, of very light color, and of good body. Yields on sage have ranged 30-75 pounds, citrus 25 pounds and up, and wild flowers 20 pounds. However, it is too early to determine average flows.

The number of producing colonies in most areas is above the 5 year average. Concentrations are especially heavy in the sage areas with about 20,000 colonies reported in the greater Saugus-Castaic area along One location was stocked with over 500 colonies.

NORTH PACIFIC STATES

Oregon - Offerings of honey were light. The demand was good and the market unchanged.

Colonies were in good condition. Warm temperatures permitted bees to be very active. Crimson clover flow was over. Cane berries were producing a heavy flow. Vetch was just beginning. The spring flow has been heavy so far.

NORTH PACIFIC STATES (Continued)

Washington - Offerings of honey were moderate. The demand was good and the market steady.

Colonies were in fairly good condition. Bee population was heavy, and stores generally ample. Bees were working wild flowers, fruit trees, raspberry, wild berry and maple bloosoms. Temperatures were slightly above normal in most areas. Some swarming was reported.

Honey plants were in good condition, although soil moisture was generally below normal.

INTERMOUNTAIN STATES

Colorado - Practically no honey was avæilable. New crop honey was not ready. Colonies were in good condition. Bee

population was heavy and stores were ample. Bees were working wild flowers. Swarming was excessive in some yards.

Honey plants were in good 'ondition with soil moisture above normal. Spraying was underway in alfalfa fields for control of insects.

Idaho - Beekeepers had sold practically all honey. No honey prices were reported. Colonies were in fair condition. Bee population was below normal. Stores continued to build'up. Bees were working mostly wild flowers and dandelion. Many beekeepers were unable to get enough package and queen bees to make up winter losses.

Honey plants were in need of moisture at most locations.

Montana - Practically all old crop had been sold. No sales were reported. New crop honey was not ready.

Most colonies were in fairly good condition. Bee populations ranged from moderate to heavy, and stores from light to ample. Bees were working wild flowers.

Honey plants were in good condition, although growing season was one to two weeks later than normal. Soil moisture ranged from below normal to normal. Rain was needed in most areas.

SOUTHWESTERN STATES

Arizona - Offerings of honey were light. Demand was good and the market slightly higher. The demand for beeswax was good and prices were steady.

Colonies were in good condition. Bee population was heavy and stores were building up. Bees were working alfalfa and mesquite.

Honey plants were in good condition with soil moisture normal.

Oklahoma - Offerings of honey were light. The demand was good and the market slightly higher. Colonies were in fairly good condition. Bee population ranged from moderate to heavy and stores continued to build-up. Bees were working wild flowers,

SOUTHWESTERN STATES (Continued)

Oklahoma - (Continued) vetch and yellow clover. The flow was being delayed by cool, cloudy weather. Swarming was light.

Honey plants were in good condition with soil moisture ranging from normal to above normal.

Texas - Offerings of honey were light to moderate. The demand exceeded the supply and prices were higher.

The condition of colonies was variable. Some colonies were in good condition while others ranged from poor to average. The bee population was moderate in most areas. Stores were light, but building up. Bees worked wild flowers and vetch. Supplemental feeding was necessary in some areas.

Honey plants were in good condition with soil moisture above normal.

PLAINS STATES

Iowa - Practically all honey had been sold. The demand was good and the market steady.

Colonies were in good condition with bee population moderate. Stores were light, but beginning to build-up. Bees were working wild flowers.

Honey plants were in good condition, although roadside spraying killed many of honey plants. White dutch clover was in good condition. Soil moisture was above normal.

Missouri - Offerings of honey were light. Demand was good and the market steady.

Honey plants were in good condition with bee population heavy. Stores were light due to poor spring nectar flow from willow and dandelion. Rainy weather hampered bee activity. Bees worked clover and wild flowers. Some supplemental feeding of sugar syrup was necessary.

Honey plants were in good condition with soil moisture above normal.

Nebraska - Offerings of honey were very light. The demand exceeded the supply and the market was slightly higher. Colonies were in good condition. Population was moderate and stores were building-up. Bees worked dandelion. Some supplemental feeding of sugar syrup continued.

Honey plants were in very good condition with soil moisture above normal.

South Dakota - Offerings of honey were very light. The demand was very good and the market steady.

Colonies were in good condition. Bee population was heavy and stores were light. Bees were working alfalfa, wild flowers and dandelion. Bee activity was curtailed by below normal temperatures and windy weather. Honey plants were in good condition, although soil moisture was below normal in most areas.

CENTRAL STATES

Illinois - Offerings of honey were very light. The demand exceeds supply and the prices were unchanged.

Most colonies were in fairly good condition. Bee population was moderate and stores were light. Bees were working wild flowers and dandelion. Some supplemental feeding of sugar continued.

Honey plants were in good condition, although the cold spring weather hindered the dandelion flow and other spring nectar-secreting plants. Soil moisture was above normal.

Indiana - Practically no honey was being offered. The demand exceeds the supply at steady prices.

Most colonies were only in fair condition. Bee population ranged from light to moderate. Many colonies cut brood due to short, or non-existent, stores. Populations declined in some areas. Many beekeepers found it difficult or impossible, to get package bees and queens. Due to the cold, rainy weather, bees were prevented from gathering stores during the dandelion and fruit bloom flow.

Honey plants were in good condition, although below normal temperatures and rainy weather affected spring flow. White dutch clover was beginning to bloom. Generally, clovers are late due to cold spring weather.

Michigan - Offerings of honey were very light. The demand was good and the market slightly higher.

Most colonies were in fair condition. Bee population was moderate and stores were light. Bees were working wild flowers. Some supplemental feeding was necessary. The cold, rainy weather prevented bees from gathering pollen and nectar from dandelion and fruit bloom.

Honey plants were in good condition with soil moisture ranging from normal to above normal.

Minnesota - Offerings of honey were light. The demand was very good and prices unchanged in most areas.

The condition of most colonies was average. Bee population was moderate and stores were light, but building up in most yards. Bees worked wild flowers and dandelion. The excessive rain and cold hampered bee activity on several days. Some supplemental feeding was necessary.

Freezing temperatures on May 12-13 damaged dandelion and fruit bloom in some areas. Choke cherries, wild throng and crab apples were beginning to bloom. White dutch clover appeared to be in good & condition.

Ohio - Offerings of honey were light. The demand was good, and the market slightly higher.

Colonies were in fairly good condition. Bee population ranged from moderate to heavy. Stores were light, but building-up. Bees were working wild flowers.

CENTRAL STATES (Continued)

Ohio (Continued) Unnatural swarming

was reported in some yards.

Honey plants were in good condition with soil moisture above normal. Cool temperatures and rain prevented bees from working honey plants in some areas. Sweet clover and alfalfa plants were in very good condition.

Wisconsin - Offerings of honey were light. The demand was good and market

unchanged.

Colonies were in good condition at most locations. Bee population was moderate, stores were light but continued to build up. Bees were working wild flowers, willows, dandelion, wild plum and other fruit bloom. Bee activity was hampered by the rain, cool cloudy weather. Supplemental feeding continued in some

Honey plants were in good condition with soil moisture above normal.

NORTHEASTERN STATES

Massachusetts - Offerings of honey were light. The demand was good and the market steady. Colonies were in good condition. Bee population was moderate and stores were building up. Bees were working wild flowers and fruit tree blooms.out in some areas, and surplus build-

Honey plants were in good condition

with soil moisture normal.

New Jersey - Offerings of honey continued very light. Demand exceed supply.

Colonies were in good condition. Bee population was heavy and stores were building up. Bees were working wild flowers and blueberries.

Honey plants were in very good condition with soil moisture above normal.

New York - Offerings of honey were very light. No prices were reported. Colonies were in fairly good condition. Bee population was moderate and stores were light. Bees were working wild flowers. Supplemental feeding was necessary in a few yards. The cold, wet weather prevented bees from working. Most colonies were just making a living. Little, or no, surplus honey was being gathered.

Honey plants were in fairly good condition with soil moisture above normal.

Pennsylvania - Offerings of honey were light. The demand was good and the market steady.

Colonies were in good condition. Bee population ranged from moderate to heavy. Stores were light, but building up. Bees worked wild flower and fruit tree blooms. The cool, wet weather held back bee activity. Swarming was very light. Nectar flow was poor.

Honey plants were in good condition with soil moisture normal.

NORTHEASTERN STATES (Continued)

Vermont - Practically no honey was available. No prices were reported. Colonies were in good condition. Bee population was moderate and stores were light. Bees were working dandelion.

Honey plants were in very good condition with soil moisture above normal.

SOUTH ATLANTIC STATES

Kentucky - Offerings of honey were very light. Demand was good and the market steady.

Colonies were in good condition. Bee population was moderate and stores were building up. Bees worked wild flowers and clover. The tulip poplar flow was below normal. The cool, rainy weather hampered bee activity. Bees were unable to gather

Honey plants were in good condition with soil moisture above normal.

Tennessee - Offerings of honey continued very light. The demand was good and the market steady.

Colonies were in fairly good condition. Bee population was heavy and stores were building up. Bees were working clover. Bee activity was hampered by cool, wet weather. Nectar was washedup was slow.

Honey plants were in good condition with soil moisture from normal to above normal.

Virginia - Offerings of honey were light. The demand was good and the market steady. Colonies were in fairly good condition. Bee population was moderate and stores were building up. Bees worked tulip poplar and wild flowers. Bee activity was curtailed by cloudy skies, rain and below normal temperatures.

Honey plants were in good condition with soil moisture above normal.

West Virginia - Offerings of honey were moderate. The demand was fairly good at slightly lower prices.

Colonies were in good condition. Bee population was heavy and stores were building up. Bees were working wild flowers. Some damage was reported from pesticide and herbicide spray.

Honey plants were in good condition with soil moisture normal.

SOUTHEASTERN STATES

Florida - Offerings of honey were moderate. The demand was good. Prices were slightly higher.

Colonies were in good condition. Bee population ranged from moderate to heavy and stores were ample.

Most beekeepers had finished extracting new crop of spring honey. The early flow was reported good. The honey quality and color was good.

SOUTHEASTERN STATES (Continued)

Honey plants were in fairly good condition with soil moisture normal in most areas.

Georgia - Excessive rain sharply very good, and practical reduced gallberry and tupelo crop. Rain- beekeepers had sold out. fall was 25 inches above normal.

Prospects are good for palmetto flow.

Yery light. The demand

SOUTHEASTERN STATES (Continued)

South Georgia bees were in normal condition, even with high rainfall. Demand for package bees and queens was very good, and practically all Georgia beekeners had sold out.

Louisiana - Offerings of honey were very light. The demand was fair and the market steady. Colonies were in fairly good condition. Bee population was moderate and stores were ample.

Honey plants were in good condition with soil moisture above normal.

TERMINAL MARKET REPORTS

Market prices (sales or quotations as indicated under each city) shown below were obtained from local brokers, packagers, wholesalers and other receivers in the respective cities. Current quotations are shown for markets where sales for the period could not be obtained. Sales are usually subject to a one percent (1%) discount if payment is made within 10 days. Comments on market conditions reflect the opinion of the local trade for the month of May. Sixty pound cans are on a per pound basis and smaller units of honey are on a per case basis unless otherwise stated: Beeswax prices are per pound.

MONTHLY REPORT

UNITED STATES DEPARTMENT OF AGRICULTURE

2503 S. Agriculture Bldg., Washington, D.C. 20250 Fruit and Vegetable Division

Vol. LVII No. 6

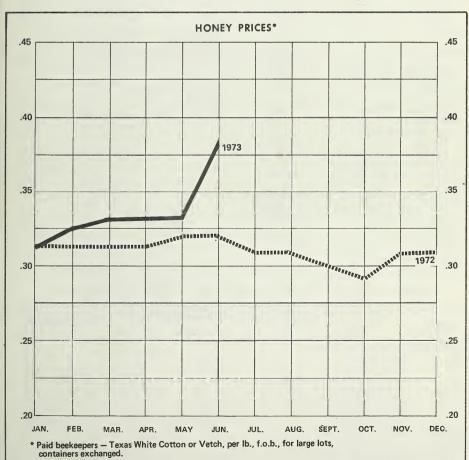

Wednesday July 11, 1973

JUNE HIGHLIGHTS

Heavy rains fell in many of southern, northeastern and southwestern states. moisture will be helpful to late producing honey plants.

Insecticide spray killed bees in several states. Midwestern states reported the most damage.

New crop honey was extracted in a few early producing states, and many others were about ready to extract. Yields were good in most early producing areas.

U. S. DEPARTMENT OF AGRICULTURE

FRUIT AND VEGETABLE DIVISION - AMS

Prices represent sales reported by correspondent beekeepers and honey handlers.

Because of the many thousands of beekeepers and handlers in the country, prices should be considered as representative and not as complete coverage of transactions for any State or area

FOOTNOTES FOR PAGES 1-4

State or origin indicates where packed, not necessarily where produced. The term "clover" includes most legumes such as white dutch clover, yellow, white sweet clover and occasionally such legumes as alfalfa and vetch mixed with other clover.
2/ Containers exchanged.
3/ Containers included.

NOTE: F.o.b. as used means delievered free of charge on the means of conveyance; Del. means delievered to receiving or distribution points, less transportation and other costs from shipping points.

CALIFORNIA POINTS

Colony conditions were good to excellent in most areas of the State during June. Pollen supplies, though light in some areas, were adequate. Colonies had good populations and broodrearing was active. Surplus honey was being extracted in most areas. Honey supplies were being replenished in the packaged bee and shipping areas. Swarming was virtually completed by the end of June, and ranged from normal to above normal.

Colonies were being moved to pollination locations, both in California and out of state. Other colonies were being moved to higher elevations, buckwheat, star thistle, or other summer locations. In the San Joaquin Valley, some colonies were placed in cotton. The cotton bloom was just starting.

Rental fees for pollination reported during June were mostly \$4.00 per colony for alfalfa and clover, and \$6.00 per colony for melons. Other colonies had been rented earlier.

Star thistle, tarweed, alfalfa, clover, trefoil, toyon, sweet clover, buckwheat, sage, buckeye, birdsfoot, safflower, were in good condition with soil moisture and various weeds were being worked for nectar and most of these plus mustard, melons, and irrigated pastures were being worked for pollen.

Star thistle was looking very good and most other irrigated plants were in good to very good condition. Nonirrigated plants were drying up rapidly. However, tarweed and several other deep rooted plants appeared to be doing well. Extracting of sage, orange, vetch, and the first of the light amber honeys had started. It is too early to estimate averages, but reported yields of sage have ranged from 30 to 90 pounds per colony.

The number of producing colonies in the various areas range from near the 5-year average to above the 5-year average, moderate. The demand was good and the

NORTH PACIFIC STATES

Oregon - The demand for honey was good. The market was steady.

Colonies were in good condition. population was moderate and stores were ample in most yards. Bees worked clover and wild flowers. Some beekeepers were preparing bees for move to fireweed areas in the mountains and Klamath area.

The weather was warm and dry in most areas until mid-June. Rainfall was above normal the latter half of June. Late honey plants were in good condition.

Washington - No honey market conditions were reported.

Colonies were only infair condition. Bee populations were moderate and stores light in most areas. Supplemental feeding was necessary in a few areas.

INTERMOUNTAIN STATES

Colorado - Offerings of honey were light. The demand was good and the market steady.

Colonies were in fairly good condition. Bee populations were moderate and stores ample in most yards. Bees were working clover and alfalfa. Excessive swarming was reported in some yards.

Honey, plants were in good condition with soil moisture ranging from normal to above normal.

Montana - Offerings of honey were light. The demand was good and the mar-

Colonies were in fairly good condition. Bee population range from moderate to heavy while stores were ample in most yards. Bee were working clover, alfalfa and wild flowers.

Honey plants were in fairly good condition. Soil moisture range from below normal to normal.

Utah - Colonies were in good condition. Bee population was moderate and stores were ample. Bee was working clover, alfalfa and wild flowers. Honey plants above normal in most areas. Desert areas continued dry.

Wyoming - Practically no honey was offered for sale. The demand exceeded the supply and the market was steady.

Colonies were in fairly good condition. Bee population was moderate and stores were building up. Bees were working clover and alfalfa. A moderate to heavy bee loss was reported from insecticide spray.

Honey plants were in good condition, although soil moisture was below normal in most areas.

SOUTHWESTERN STATES

Arizona - Offerings of honey were market slightly higher. The demand for beeswax was slow and the market steady.

Colonies were in good condition. Bee populations were heavy and stores ample. Bees were working alfalfa and mesquite. Honey plants were in good condition with soil moisture normal.

Oklahoma - Offerings of honey were light. The demand was fairly good and the market steady.

Colonies were in fairly good condition. Bee population ranged from moderate to heavy and stores were ample in most yards. Bees worked clover and wild flowers.

Honey plants were in poor condition in areas where soil moisture was below normal, and in good condition where soil moisture was ample.

Texas - Offerings of honey were light. The demand was very good. Prices were higher.

SOUTHWESTERN STATES (Continued)

Texas - (Continued)

The condition of colonies was variable. Bee population was light in some sections and heavy in others. Stores were ample in a few areas and building up in others. Bees worked vetch, cotton and wild flowers.

Honey plants were in good condition with soil moisture above normal in most areas. The flow from early honey plants was below normal in most areas. Prospects were good for a late flow.

PLAINS STATES

<u>lows</u> - Offerings of honey were light.
The demand was good and the market steady.

Colonies were in good condition.
Bee population was moderate and stores
were ample. Bees worked clover and alfalfa.
Honey plants were in poor condition in
most areas due to soil moisture being
below normal. Top-soil was very dry.

Missouri - Offerings of honey were moderate. The market was steady.

Colonies were in good condition.
Bee populations were heavy and stores
ample. Bees worked clover, basswood and
wild flowers. Beekeepers reported heavy
yields from basswood and white clover.

Money plants were in very good condition with soil moisture normal.

Nebraska - The demand for honey was

Colonies were in good condition. Bee population was moderate. Some swarming was reported. Bees worked clover, and indications were that the honey flow would be average. Extracting of new crop honey was expected around the middle of July.

Honey plants were in good condition

with soil moisture normal.

North Dakota - Practically all old crop honey had been sold. New crop was not ready.

Many colonies were in poor condition. Bee population was light and stores were building up. bees worked clover and alfalfa. Honey plants were in poor condition because soil moisture was below normal in most areas.

South Dakota - Offerings of honey were light. The demand was good and the market steady.

Colonies were in fairly good condition. Bee population was moderate and stores were ample. Bees worked clover and alfalfa. Honey flow was just starting. Early indications were that flow would be fairly good.

CENTRAL STATES

<u>Illinois</u> - Offerings of honey were light. The demand was good and the market steady.

Colonies were in fairly good condition. Bee populations were moderate and stores range from light to ample. Bees

CENTRAL STATES (Continued)

Illinois - (Continued) worked clover and wild flowers. Southern Illinois was starting to extract new crop honey. This area is about two weeks later than usual. Central and Northern Illinois were in a light flow. The crop prospects for Illinois were discouraging due to wet weather and light clover crop. Most growers planted corn and soybeans this year.

Honey plants were in good condition with soil moisture ranging from normal to above normal.

Indiana - Offering of honey was light.
The demand was very good and the market
higher at producer level.

Most colonies were only in fair condition. Bee population ranged from light to moderate. Stores were light in most yards. Some colonies were dying from starvation into the first week in June. Others were in poor condition, even though supplemental feeding was heavy. Bees worked clover, although surplus was expected to be one of the lightest on record.

Honey plants were in poor condition. Soil moisture ranged from normal to above normal.

Michigan - Colonies were in fairly good condition. Bee populations were moderate in most yards. Stores were light, although building up. Bees worked clover, alfalfa and wild flowers. Honey flow has been light to date.

Honey plants were in good condition with soil moisture normal.

Minnesota - Offerings of honey were light. The demand exceeded the supply and the market was steady.

Colonies were fairly good condition in most areas. Bee populations ranged from light to moderate and stores were light, but continued to build up. Some commercial operaters were feeding syrup as late as June 22th, due to the cold, wet weather. Cool nights and rainy days curtailed bee activity much of the time during normal spring build up. Bees worked clover. Clovers were still in bloom, and with a few days of favorable weather, bees could collect surplus honey.

Honey plants were in good condition with soil moisture normal.

Ohio - Offering of honey was light. The demand was good and the market slightly stronger.

Colonies were in good condition. Bee population ranged from moderate to heavy. Stores were ample in most yards, while others were building up. Bees worked clover and wild flowers. Honey flow was light during June due to the heavy rainfall

Honey plants were in fairly good condition with woil moisture above normal.

CENTRAL STATES (Continued)

Ohio - (Continued) Alfalfa, Red clover and Basswood look very good. These, heavy. Stores were building up. Bees and other late producing plants, will det- were working clover. Rainy days hampered ermine amount of honey flow this year, since bees were unable to work early plants.

Wisconsin - Offerings of honey were light. The demand was good and the market steady.

Colonies were fairly good condition in most areas. Bee population ranged from light to heavy. Stores were ample in most areas, although little surplus was reported.

Honey plants were in very good condition with soil moisture above normal.

NORTHEASTERN STATES

Massachusetts - Offerings of honey were light. The demand was good and the market steady.

Colonies were in fairly good condition. Bee populations ranged from moderate to heavy. Stores were light, but building up. Bees worked clover, wild and domestic flowers. Early indications point to a moderate honey flow.

Honey plants were in good condition with soil moisture normal to above normal.

New Jersey - Offerings of honey were light. The demand exceeded the supply at slightly higher prices.

Colonies were in good condition. Bee population was heavy and stores were ample. Bees worked wild flowers. Honey plants were in very good condition with soil moisture above normal.

New York - Offerings of honey were very light. The demand was good and the market steady.

Colonies were in fairly good condition. Bee populations ranged from light to heavy. Stores were ample in some areas, and light in others. Bees worked clover, vetch and wild flowers. Heavy rains hampered bee activity. Some areas reported little or no surplus honey, while others estimate surplus at 30-40 1bs. per hive. Heavy swarming was reported.

Honey plants were in good condition with soil moisture above normal.

Pennsylvania - Offerings of honey were light. The demand was good and the market slightly higher.

Most colonies were in fairly good condition. Bee populations ranged from light to moderate. Stores were ample. Bees worked clover and wild flowers. The rain and cool weather kept bees from working on some days. A slow build up of surplus honey was reported.

Honey plants were in good condition with soil moisture above normal.

Vermont - Practically no honey was available.

Colonies were in good condition with

NORTHEASTERN STATES (Continued)

Vermont - (Continued) bee population bee activity. Very little honey had been collected.

Honey plants were in very good condition with soil moisture above normal.

SOUTH ATLANTIC STATES

Kentucky - Old crop honey had been sold. New crop was not ready. Extracting of new crop was expected to get underway in early July.

Colonies were in good condition. Bee population was heavy and stores were ample. Bees worked clover and wild flowers. Heavy rains in June kept bees from working. Bees were very active during the latter portion of the month

Honey plants were in very good condition with soil moisture above normal in most areas.

Maryland - Offerings of honey were light. The demand was good and the market steady.

Colonies were in good condition. Bee population was heavy and stores were ample. Bees worked clover and wild flowers. Early indications are that yields will be beteer than last year.

Honey plants were in good condition with soil moisture above normal.

North Carolina - Offerings of honey were moderate. Demand was good and the market was steady.

Colonies were in good condition. Bee population was heavy. Stores were ample in some yards and building up in others. Bees worked clover, wild flowers and gallberries. Sourwood was beginning to bloom. Extracting of new crop honey was underway.

Honey plants were in very good condition with soil moisture above normal.

Tennessee - Offerings of honey were light to moderate. The demand was good and the market steady.

Colonies were in fairly good condition. Bee populations ranged from moderate to heavy. Stores continued to build up. Honey flow was light due to rainy weather which reduced bee activity. Bees worked clover.

Honey plants were in good condition with soil moisture ranging from normal to above normal.

Virginia - Offerings of honey were light. The demand was good and the market steady. Colonies were in good condition. Bee population was heavy and stores were ample. Bees worked wild flowers.

Honey plants were in very good condition with soil moisture above normal.

SOUTHEASTERN STATES

Florida - Offerings of honey were light. The demand was very good and the market slightly stronger.

Colonies were in fairly good condition. Bee population was heavy and stores were ample. Bees worked wild flowers. Bee activity was hampered by rainy weather. Honey flow was light in the northern and western portions of the

Honey plants were in good condition with soil moisture normal in most areas.

Louisiana - Offerings of honey were light. The demand was fair and the market steady.

Most colonies were in average condition. Bee population was moderate and stores were ample. Bees worked wild flowers.

Honey plants were in good condition with soil moisture normal.

Georgia - The South Georgia honey flow from gallberry and tupelo is over. The crop was estimated below normal. During the latter part of June, Beekeepers were preparing for the pepper bush flow. Prospects were only fair for a normal flow due to above normal rainfall. Some South Georgia bees were being noved to north Florida for the partridge pea flow. Prospects for this flow were reported fairly good.

SOUTHEASTERN STATES (Continued)

Georgia - (Continued)

Beekeepers report that insecticide poisoning has become a problem. The soybean crop is large and spread over a wide area of the state, beekeepers find it very difficult to place bees in safe locations because of the heavy insect: icide poisoning for this crop.

Bee populations in North Georgia appeared to be increasing, as bees continue to recover from the late freeze experienced this spring. The tulippoplar flow was good and helped the bees recover. Most beekeepers feel that the population is sufficient to produce a good crop of honey when the sourwood flow begins. Prospects are good for a normal sourwood flow.

The demand for new crop honey was very good. Offerings of honey were light. Strained packing grade honey in 50-1b, drums sold at 40c per pound in wholesale lots. Offerings of chunk honey were light, and sold at 45-50¢ per pound. Beeswax sold for 63-65¢ per pound.

POLITNATING SERVICE*

Importance of Honey Bees as Polinators

The vital pollinating service that honey bees perform in our modern agriculture is not generally known by the public or by many farmers. Even scientists working in closely related agricultural fields often fail to give the honey bee its due credit as an essential "agricultural worker."

Some crops are wind- or self-pollinated, but many of our fruits, vegetables, legumes, California in the spring of 1967 that and other crops are insect pollinated. Pollination of these crops, occupying about 3 million acres of land and valued at \$1 billion annually, is largely dependent on honey bees. A few other insects contribute to pollination as they visit the flowers or blossoms, but honey bees a are the most efficient and only dependable pollinators. They visit the flowers to collect nectar and pollen and, importantly, they do not harm the plant in the process. New plantings requiring pollination will need an increasing number of honey bees.

Since the extensive use of insecticides to control harmful insects and other agricultural practices have tended to greatly reduce the effectiveness of wild bees in some areas, the honey bees are the only remaining effective pollinators.

Investigations by the University of California show that prune growers in one county lost \$1 million a year for 5 years because of lack of bees for adequate pollination. Also, a news item, "The Year the Bees Got Grounded," which appeared in "Time," November 10, 1967, describes the cold, wet weather in prevented bees from flying and the resulting impact on fruit production. The relationship between the honey bees and the supply and price of some foods at the retail markets is vividly described.

Research results have consistently indicated that honey bees are necessary for proper pollination of alfalfa and red clover. A review of 5-year average yields of these crops grown commercially in two parts of the country seems to confirm these results, even though allowance must be made for differences in weather conditions. For example, pollination of alfalfa and red clover seed crops is carefully provided by growers in the West, whereas in the Midwest, where hay rather than seed is the intended crop, pollination is left to chance.

*Source: Agriculture Research Service, 42-150.

Market prices (sales or quotations as indicated under each city) shown below were obtained from local brokers, packagers, wholesalers and other receivers in the respective cities. Current quotations are shown for markets where sales for the period could not be obtained. Sales are usually subject to a one percent (1%) discount if payment is made within 10 days. Comments on market conditions reflect the opinion of the local trade for the month of June. Sixty pound cans are on a per pound basis and smaller units of honey are on a per case basis unless otherwise stated: Beeswax prices are per pound.

MONTHLY REPORT

UNITED STATES DEPARTMENT OF AGRICULTURE

AGRICULTURAL MARKETING SERVICE Fruit and Vegetable Division 2503 S. Agriculture Bldg., Washington, D.C. 20250

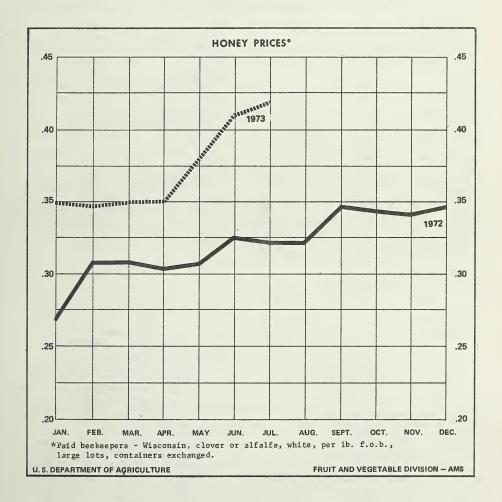

Vol. LVII No. 7

Friday August 10, 1973

JULY HIGHLIGHTS

Honey prices were slightly higher in most states. Demand continued very good. Colonies were strong. Early flows were variable.

Dry weather damaged honey plants in many western states. Excessive rain hampered bee activity and affected nectar flow in some northeastern states.

Prices represent sales reported by correspondent beekeepers and honey handlers.

Because of the many thousands of beekeepers and handlers in the country, prices should be considered as representative and not as complete coverage of transactions for any state or area.

FOOTNOTES FOR PAGES 1-1/ State or origin indicates where packed, not necessarily where produced. The term "clover" includes most legumes such as white dutch clover, yellow, white sweet clover and occasionally such legumes as alfalfa and vetch mixed with other clover. 2/ Containers exchanged. 3/ Containers included.

NOTE: F.o.b. as used means delivered free of charge on the means of conveyance; Del. means delivered to receiving or distribution points, less transportation and other costs from shipping points.

COLONY, HONEY PLANT AND MARKET CONDITIONS DURING JULY

CALIFORNIA POINTS

Colony conditions were generally good to excellent. Brood-rearing continued active, except in Southern California, where the brood area was being choked down as the buckwheat, tarweed, garden plants, and honey flow decreased. However, the brood was about 6-8 frames in better locations. Spray damage, so far, has been light in most areas. Worm damage on alfalfa in some areas has caused much pest control activity, but most beekeepers have stayed out of average yields. Some reported yields fields rather than have their bees affected were 30 pounds on alfalfa, 60 pounds on

Only light movement of colonies was taking place. Some bees were still being moved out of mountain locations to alfalfa, colonies in the various areas of the thistle, or pasture locations. A few col- state ranged from slightly below the 5 onies were still being moved to melons for year average to as much as 50 percent pollination. Some colonies were rented for above. melon pollination at \$6.00-8.00 per colony. Also during July, colonies were rented for alfalfa to \$4.00-6.00, and clover seed at

CALIFORNIA POINTS (Continued)

\$4.00-5.00 per colony.

Star thistle, trefoil alfalfa, clover, lima beans, cotton, safflower, sumac, miscellaneous weeds were being worked for nectar; and most of these, plus corn and milo, for pollen.

Some honey was being extracted, but it is too early in the season to give buckwheat, 30 pounds on orange, and 70 pounds on sage. The number of producing

NORTH PACIFIC STATES

Oregon - Offerings of honey were moderate. Demand was fair and the market was steady.

Colonies were in good condition. Bee population was moderate and stores were ample. Bees worked clover, alfalfa and fireweed. One beekeeper reported the honey crop was almost a failure.

Honey plants were in poor condition with the soil moisture below normal in most areas.

Washington - Honey market conditions were not reported.

Temperatures during the latter part of July ranged in the high 90's to over 100°. This curtailed bee activity in the highheat areas, otherwise, bees appeared in good condition and were making honey.

INTERMOUNTAIN STATES

Colorado - Offerings of honey were light. The demand was good and the market slightly higher.

Colonies were in fairly good condition.clover. Bee population was moderate and the stores ranged from light to ample. Bees worked clover and alfalfa. Honey production was expected near normal in some sections of the state and below in others.

Honey plants were in fairly good condition where soil moisture was normal, and in poor condition in dry sections.

Montana - Practically no honey was being offered. Some export inquiry was reported.

Colonies were in fairly good condition with bee population ranging from moderate to heavy. Stores were ample. Bees worked clover, alfalfa and a few wild flowers.

Honey plants were only in fair condition due to soil moisture being below normal.

Wyoming - Offerings of honey were mod- with soil moisture normal. erate. The demand exceeded the supply at slightly higher prices.

Colonies were in good condition. Bee population was moderate and stores were ample. Bees worked clover, alfalfa and milk-weed.

Honey plants were in fairly good condition, although soil moisture was below normal in most sections.

SOUTHWESTERN STATES

Arizona - Offerings of honey were moderate. The demand was good and the market slightly higher.

Colonies were in good condition. Bee population was heavy and stores were ample Bees worked mesquite and cotton.

Honey plants were in good condition with soil moisture normal.

Oklahoma - Offerings of honey were light. The demand was fair and the market flow; however, yields were expected below slightly higher.

Most colonies were only in fair con-

SOUTHWESTERN STATES (Continued)

Oklahoma (Continued) -dition. Bee population was moderate and stores were light. Bees worked alfalfa.

Many plants were in poor condition due to the soil moisture being below normal.

Texas - Offerings of honey were moderate. The demand was very good and the market slightly higher.

Colonies were in fairly good condition. Bee population ranged from moderate to heavy while stores were ample in most yards. Bees worked wild flowers and cotton.

Honey plants were in good condition in most areas with soil moisture above normal.

PLAINS STATES

Iowa - Demand for honey was good, and the market steady.

Colonies were in fairly good condition. Bee population ranged from moderate to heavy. The stores were ample. Bees worked clover, alfalfa and wild flowers. A very good flow was reported from white dutch

Honey plants were in good condition in most areas. The soil moisture ranged from normal to above normal.

Missouri - Offerings of honey were The demand was good and the market light. higher.

Colonies were in good condition. Bee population was heavy and the stores were ample. Bees worked wild flowers.

Honey plants were in very good condition with the soil moisture above normal.

Nebraska - Demand was good for honey. Prices were steady.

Colonies were in fairly good condition with bee population moderate. Bees worked clover and alfalfa. Beekeepers had not started to extract major honey crop.

Honey plants were in good condition

South Dakota - Offerings of honey were light. The demand was good and the market slightly higher.

Colonies were in fairly good condition. Bee population was moderate and stores were ample. Bees worked clover and alfalfa. Honey plants were in poor condition because soil moisture was below normal. beekeeper estimated honey production at 50% of normal crop.

CENTRAL STATES

<u>Illinois</u> - Practically no honey was being offered. Demand exceeded the supply. The market was steady.

Colonies were in fairly good condition. Bee population was moderate and stores continued to build up. Bees worked clover and wild flowers. The southern tip of Illinois, and in northern portion, were in a late average. Central Illinois experienced a very poor crop.

CENTRAL STATES (Continued)

Indiana - Offerings of honey were light. The demand exceeded the supply and the mar-light. The demand exceeded the supply and ket was steady.

Colonies were in good condition. Bee population was moderate and stores were building up. Bees worked wild flowers.

The condition of honey plants was variable. Moisture was sufficient. Honey plants were in good condition; and prospects were good for a normal fall flow. Goldenrod and aster were in good condition where soil moisture was adequate.

Michigan - No report was made on

honey market conditions.

Colonies were in good condition. Bee population was moderate and stores were

building up.

Honey plants were in good condition with soil moisture normal. The honey flow was running about one month late. Bees were active, and a fair crop was expected from the fall flow.

Minnesota - Offerings of honey were light. The demand exceeded the supply and

the market was slightly stronger.

Colonies were in good condition. Bee population ranged from moderate to heavy. Stores were ample in most hives. Bees worked clover, alfalfa and soybeans. Some damage was reported from insecticide spray. Most damage was reported in the southern portion of the state.

Honey plants were in fairly good condition. Soil moisture was normal in some areas and below normal in others.

Ohio - Offerings of honey were light. The demand was very good and the markets about unchanged.

Colonies were in good condition. population ranged from moderate to heavy. Stores were ample in most yards and building up in others. Bees worked clover, alfalfa and wild flowers. A normal honey crop was expected in most areas.

Honey plants were in good condition with soil moisture ranging normal to

above normal.

Wisconsin - Offerings of honey were light. The demand was good and the mar-

ket slightly stronger.

Colonies were in good condition. Bee population ranged from moderate to heavy and stores were ample in most yards. Bees worked clover and alfalfa. Damage from insecticide spray was reported in a few areas.

Honey plants were in good condition in most areas. A few sections reported plants in poor condition with soil moisture below normal. Most beekeepers were expecting a normal or slightly above normal honey crop.

NORTHEASTERN STATES

New Jersey . Offerings of honey were the market was steady.

Colonies were in good condition. population was heavy and stores were ample. Bees worked wild flowers.

Honey plants were in very good condition with soil moisture above normal in most areas.

New York - Offerings of honey were very light. Most beekeepers reported a light spring flow. Demand was good and the market slightly higher.

Colonies were in fairly good condition. Bee population was moderate and stores were building up. Bees worked clover, alfalfa and wild flowers.

Honey plants were in good condition with soil moisture ranging from normal to above normal. Excessive rain washed nectars from blossoms in some areas.

Vermont - Offerings of honey were light. The demand was good. Prices were slightly higher.

Colonies were in good condition with bee population heavy and stores ample. Bees worked clover, alfalfa and vetch.

Honey plants were in very good condition with soil moisture above normal.

SOUTH ATLANTIC STATES

Kentucky - Offerings of honey were moderate. The demand was good and the prices slightly higher.

Colonies were in fairly good condition. Bee population ranged from moderate to heavy and stores were ample in most yards. Bees worked clover and buckbrush.

Honey plants were in good condition with soil moisture above normal in most areas. Extracting of summer honey crop was just getting started. Beekeepers reported average yields.

Maryland - Offerings of honey were moderate, the demand was good and the mar-

ket was steady.

Colonies were in good condition with bee population heavy. Stores were ample. Bees worked wild flowers. The summer flow was over in most parts of the state and beekeepers reported yields around 55 pounds per hive.

North Carolina - Offerings of honey were moderate. The demand was good and the

markets steady.

Colonies were in fairly good condition with bee population moderate. Stores were light. Bees worked clover and wild flowers.

Honey plants were in poor condition. Soil moisture was normal.

SOUTH ATLANTIC STATES (Continued)

Tennessee - The market was unchanged in most areas of the state. The demand was good and offerings were moderate.

Most colonies were in good condition. Bee population ranged from moderate to heavy and stores were ample. Bees worked clover, alfalfa and wild flowers.

Many plants were in very good condition with soil moisture above normal.

<u>Virginia</u> - Offerings of honey were light. The demand was good and the market steady.

The condition of most colonies was average. Bee population was moderate and stores were ample. Bees worked wild flowers.

Honey plants were in good condition with soil moisture above normal. The major flows were over.

SOUTHEASTERN STATES

<u>Florida</u> - Offerings of honey were light. The demand exceeded the supply and the prices were unchanged.

Colonies were in good condition. Bee population was moderate and stores were ample. Bees worked wild flowers. Honey plants were in good condition with soil moisture ranging from normal to above normal in most areas of the state.

SOUTHEASTERN STATES (Continued)

Georgia - The gallberry, sourwood and partridge pea produced heavy yields. Production is estimated at 100-120 pounds per colony compared with 35-40 pounds last season.

The general condition of bees in most colonies was good. However, beekeepers reported some loss due to insecticide poison used on soybeans. Losses were more severe where insecticides was applied by airplane. Beekeepers found it difficult to find safe locations for colonies.

In south Georgia and north Florida the pepper bush flow was beginning. This flow is expected to continue through August. Prospects for this flow were good. Increase rainfall during the latter part of July, primarily in the form of evening showers, was beneficial to honey plants.

Demand for all grades of honey was very good and the market stronger. Export demand was very good. Honey prices, FOB per pound in 55 gallon drums, strained grade 50 to 55 cents, packers grade 44-46 cents, light amber, prices to bakers 48 cent and bottle grade 38-42 cent. Comb honey 46 to 48 cent per pound with some 50 cent and occasional sale higher and lower. Bees wax sold from 65 to 78 cent per pound, mostly 75 cent.

*Honey offered, but not sold. ** Official Minimum prices, as of July 25; all nominal.

1/ The terms C&F and CIF sometimes include points in addition to Hamburg, such as Bremen, Rotterdam or Europe. Terms FOB are usually from port nearest origin in source country. Footnotes continue on page 10.

Market prices (sales or quotations as indicated under each city) shown below were obtained from local brokers, packagers, wholesalers and other receivers in the respective cities. Current quotations are shown for markets where sales for the period could not be obtained. Sales are usually subject to a one percent (1%) discount if payment is made within 10 days. Comments on market conditions reflect the opinion of the local trade for the month of July. Sixty pound cans are on a per pound basis and smaller units of honey are on a per case basis unless otherwise stated: Beeswax prices are per pound.

Footnotes continue from page 7.

2/ "MT" means "metric ton" (2,204.62 pounds) "LT" means "long ton" (2,240 pounds);
"kgs" means "kilograms" (2.2046 pounds).

3/ Quotations stated in money units of offering countries have been converted to U.S. dollar equivalents. "NO" means "No Offer."

4/ "Dlvxy" means "Delivery period." Symbol meanings are: J-F = January-February, F-M=
February-March, M-A = March-April, A-M = April-May, M-J = May-June, M-JJ = May-July,
J-J = June-July, JJ-A = June-August, J-A = July-August, A-S = August-September, S-O
= September-October, O-N = October-November, N-D = November-December, D-J =
December - January, P = Prompt, P-JJ = Prompt-July, etc.

Vol. LVII No. 8

Tuesday, September 11, 1973

AUGUST HIGHLIGHTS

Demand continued very good for the rather limited offerings of honey. Prices were higher in many states.

Colonies were in fairly good condition. Flows were fairly light in many areas due to lack of floral sources, but was generally adequate to support colonies or make small gains. Alfalfa produced a good flow in Nevada and California. Goldenrod was beginning to produce well in some northern states.

National Agricultural Library Bee Culture Branch, Bldg. A Agricultural Research Center Beltsville, Maryland 20705

SEP 2.1 1973

FLA.

Light Tupelo

Prices represent sales reported by correspondent beekeepers and honey handlers. Because of the many thousands of beekeepers and handlers in the country, prices should be considered as representative and not as complete coverage of transactions for any state or area.

FOOTNOTES FOR PAGES 2-5

NOTE: F.o.b. as used means delivered free of charge on the means of conveyance; Del. means delivered to receiving or distribution points, less transportation and other costs from shipping points.

^{1/} State or origin indicates where packed, not necessarily where produced. The term "clover" includes most legumes such as white dutch clover, yellow, white sweet clover and occasionally such legumes as alfalfa and vetch mixed with other clover.
2/ Containers exchanged. 3/ Containers included.
NOTE: F.o.b. as used means delivered free of charge on the means of conveyance;

CALIFORNIA POINTS

Colonies were in generally good to excellent condition with ample supplies of fairly light. Demand exceeded supply and honey and pollen and good populations of voung bees. In some colonies, broodrearing operations were being cramped by honey stores. A few beekeepers reported medium to weak colonies but generally less pesticide damage than normal.

Colonies were being moved out of alfalfa and clover seed pollination locations to fall buildup or holding areas. A few colonies were being moved back into the State from Nevada or other out-ofstate summer locations. Also, some beekeepers were moving bees to avoid pesticide damage.

Bees were working cotton, alfalfa. tamarisk, buckwheat, salt cedar, yellow star thistle, partures, tarweed, blue curls, lima beans, and miscellaneous weeds brood area had been reduced due to heavy for nectar and most of these plus late melons, corn, milo, and various weeds for pollen.

condition but non-irrigated plants had dried up in many areas. However, tarweed tions produced surplus honey ranging from

Thistle, alfalfa, buckwheat, cotton, crop hay sprayed in July for cutworms was of lighter than usual color and were of medium to heavy body. The number of producing colonies in the various areas was near or above the 5-year average.

NORTH PACIFIC STATES

Oregon - One beekeeper reported the demand exceeded supply and the market was higher.

Colonies were in poor condition and bee populations were light. Honey stores were light. Honey plants were reported to Colony conditions were normal and bee popbe in poor condition and soil moisture was ulations were moderate. Bees were working below average. Other reports were not available.

INTERMOUNTAIN STATES

Colorado - Offerings of honey were fairly light. Demand was good and the market was steady to slightly higher. '

Colonies were in fairly good condition. Bee populations were fairly heavy and stores were building up at a satisfactory rate. Bees were working clover and alfalfa.

Honey plant conditions were generally good although soil moisture was below normal in some areas.

Idaho - One packer reported that offerings were light. Demand exceeded supply and the market was slightly higher.

Colony conditions were poor and bee populations were light due to spray poisoning. Honey stores were ample and bees were working alfalfa.

Honey plant conditions were good and soil moisture was normal.

INTERMOUNTAIN STATES(continued)

Montana - Offerings of honey were the market was higher.

Colony conditions were generally good although production of honey was low in some areas. Bee population was moderate in most areas and heavy in a few other areas. Honey stores were variable from light to ample although most areas reported ample stores. Bees were working clover, alfalfa

and wild flowers. Plant conditions were in many areas due to dry weather. Soil moisture was below normal.

Nevada - Offerings of honey were moderate and demand was good. The market was steady.

Colony conditions were generally good, except in alfalfa seed areas where buildup of stores. Insecticide poisoning had been a greater problem during August in seed locations due to heavy migration Irrigated honey plants were in normal of lygus and surplus honey was expected to be lower than normal. Alfalfa hav locaand blue curls were producing in many areas 60 to 90 pounds in most areas. Second

and mixed flower honey was being extracted.causing serious losses to field bees. Some Quality was generally good. Most lots werehoney was being extracted from seed locations.

Honey plants were in very good condition and soil moisture normal.

Utah - One beekeeper reported the demand for honey was very good. In many cases supply was not sufficient to meet local demand.

He reported that colonies were in poor condition as they had not built-up from heavy winter losses. This was due to the very late spring and hot summer weather.

Wyoming - Market prices were reported to be slightly higher by one beekeeper. alfalfa.

Plant conditions were good although soil moisture was below normal.

SOUTHWESTERN STATES

Oklahoma - Offerings of honey were light. Demand was very good and in some instances exceeded supply. The market was steady to slightly higher.

Colony conditions were normal in some parts of the State although, others reported below normal conditions. Stores were light in many areas due to poor plant conditions. A few areas reported ample stores. Bees were working alfalfa and cotton, although some areas reported very little source flowers for bees to work.

Plant conditions in many areas were poor due to very dry weather.

Some beekeepers expected very light production due to the dry weather.

Texas - Offerings of honey were fairly light. Demand was good to exceeds supply. The market was steady to slightly higher.

Texas(continued) - Colony conditions were normal and bee populations were generally moderate. Stores were ample. Bees were working cotton and broomweed.

Plant conditions were generally good and soil moisture was normal in most areas although there were reports of dry weather in South Texas.

PLAINS STATES

Iowa - Demand was good and the market was slightly higher.

Colony conditions were normal and bee populations were moderate although some reported heavy populations. Honey stores were ample. Bees were working mostly wild flowers.

Honey plant conditions were generally good. Soil moisture was normal.

One beekeeper reported that strong colonies would average over 100 pounds per colony. His major flow lasted for only 35 to 40 days.

Missouri - Demand for honey was good and the market was steady.

Colony conditions were good and bee populations were heavy. Stores were ample and bees were working wild flowers.

Honey plant conditions were good and soil moisture was normal.

Nebraska - Offerings of honey were moderate and demand was good. The market was higher.

Colonies were in good condition and bee populations were heavy in some areas of the state. Conditions were less promising in other areas due to dry weather and spray poisoning. Honey stores in some areas were ample and bees were working clover and alfalfa. It was expected that this years honey crop will be slightly less than last

Honey plant conditions were fair and soil moisture was about normal in some areas and soil moisture was normal. and dry in other areas.

light. Demand was good. The market slightly higher.

One beekeeper reported that honey conditions were average and bee populations were heavy. Honey stores were ample and bees were working alfalfa.

Honey plant conditions were poor in his area and soil moisture was below normal.

South Dakota - Offerings of honey were moderate and demand was good. The market was higher.

Colony conditions were average and bee populations were normal. Stores were ample and bees were working clover, alfalfa and wild flowers.

Honey plant conditions were poor and soil moisture was below normal. Rainfall was from 4-6 inches below normal so far this season in the southern two-thirds of the State.

Illinois - Offerings were light. Demand exceeded supply. The market was steady.

Colonies were in normal condition bee populations were moderate. Honey stores were building up and bees were working wild flowers according to one beekeeper.

Honey plant conditions were normal and soil moisture was above normal.

According to one report the honey crop in Illinois will be well below normal. Spray poisoning in soybean fields had caused heavy colony losses in some areas.

Indiana - Offerings were light and demand was good. The market was slightly higher.

Colonies were in good condition and bee populations were above normal for this time of the year. Stores were ample and bees were working wild flowers. Smart weed and goldenrod have vielded well. Asters are about two weeks behind and the flow will be late. The crop was expected to be below normal in southern, northeastern, and eastern parts of the State, below normal in the northcentral part of the State and good in the northern part of the State.

Honey plants were in good condition and soil moisture was above normal.

Michigan - Offerings were moderate. Demand exceeded supply and prices were slightly higher.

Colonies were in generally good condition and bee populations were moderately heavy. Stores were ample and bees were working wild flowers. The honey crop was variable from fair to good but most beekeepers that worked sweet clover and spotted star thistle reported a good crop.

Honey plants were in good condition

Minnesota - Offerings were light. North Dakota - Offerings of honey were Demand was very good. The market was slightly higher. Colonies were in good condition and bee populations were moderately heavy. Stores were ample and building in all areas. Bees were working wild flowers including goldenrod, alfalfa, soybeans and sunflowers. Some beekeepers reported heavy spray poisoning in some colonies.

> Honey plants were in good condition in most areas and soil moisture was normal or above normal.

Ohio - Offerings were light. Demand was very good and the market was slightly higher.

Colonies were generally in good condition and bee populations were moderately heavy. Stores were ample and bees were working clover, alfalfa and smart weed. The honey flow was spotty during August from light to very good. Some

CENTRAL STATES (continued)

Ohio (continued) - beekeepers reported very good gains from white dutch and red clover

Honey plants ranged from fair to good condition and soil moisture was normal to above normal for this time of year. Cool weather and rains slowed the honey flow in some sections during the

Wisconsin - Offerings of honey were moderate. Demand was very good to exceeds moderate. Demand was good to exceeds supply. The market was slightly higher.

Colonies were in generally good conheavy. Honey stores were ample and bees were working clover, alfalfa and wild flowers. Yields were expected to be fair to very good. Honey plants were in generally good condition. Soil moisture was spotty depending on areas of the State.

NORTHEASTERN STATES

New Jersey - Offerings of honey were fairly light. Demand exceeded supply and the market was slightly higher.

Colonies were in generally good condition and bee populations were moderately heavy. Stores were ample. Bees were working wild flowers including goldenrod.

Extracting is underway and many beekeepers report an excellent crop.

Honey plants are in good condition and soil moisture is more than adequate.

New York - Offerings were fairly light. Demand was very good to exceeds supply. The market was steady to slightly work. higher.

Most colonies were in fairly good condition. Bee populations ranged from light to heavy but most beekeepers reported that they were about normal for thisfairly light. Demand was good and the time of the year. Stores were moderate to ample and building. Bees were working clover, alfalfa and wild flowers. Golden- Bee populations were moderately heavy. rod was providing good yields in some

Plant and moisture conditions were quite variable throughout the State with some areas very dry and other areas well above normal.

Pennsylvania - Offerings of honey were light. Demand was very good and prices were slightly higher.

Colonies were in good condition and bee populations were moderately heavy. Stores ranged from light to ample. Bees were working wild flowers.

Honey plants were in good condition and soil moisture was above normal.

Vermont - Offerings of honey were liberal according to one mekeeper. Demand was good and the market was lightly higher.

Colonies were in good condition and bee populations were moderate. Honey stores were ample and bees were working

NORTHEASTERN STATES (continued)

Vermont (continued) - goldenrod. A very good crop was produced in the Champlain Valley but only fair production in other sections of the State.

Honey plants were in good condition although soil moisture was slightly below normal

SOUTH ATLANTIC STATES

Kentucky - Offerings of honey were supply and the market was steady to slightly higher. Colonies were in normal condition dition and bee populations were moderately for this time of the year and bee populations were moderate. Stores were ample. were working mostly wild flowers.

> Honey plants were in good condition although soil moisture was below normal.

> Maryland - Offerings were light and demand was good. The market was steady.

Colonies were in average condition and bee populations were moderate. Stores were ample. Bees were finding very few flowers to work although were able to about maintain colony weight from scattered sources. Brood-rearing is still going on in most colonies.

Plant conditions were poor although soil moisture was normal.

North Carolina - Offerings were moderate. Demand was good and the market steady.

Colonies were in normal condition for this time of year and bee populations were moderate. Stores were light and very few floral sources were available for bees to

Honey plants were in generally poor condition and soil moisture was below average according to one report.

Tennessee - Offerings of honey were market was slightly higher.

Colonies were in average condition. Stores were ample and bees were working wild flowers and some clover. Yields of honey have been below normal.

Honey plants were in fairly good condition and soil moisture ranged from below normal to above normal depending on section of the State.

<u>Virginia</u> - Offerings of honey were fairly light. Demand was good and the market was about steady.

Colonies were in fairly good comdition and bee populations were moderate. Stores were ample and bees were working wild flowers where they were available. Honey plants were in poor to good condition depending on soil moisture.

SOUTHEASTERN STATES

Florida - Offerings of honey were moderate. Demand was very good and the market was about steady. Colonies were in average condition and bee populations were

SOUTHEASTERN STATES (continued)

Florida(continued) - moderately ing in some areas. Bees were working wild flowers, although in some instances were receiving supplemental feeding.

and soil moisture was near normal.

Georgia - Demand was good and the mar-laying up winter stores. ket steady. August weather was mostly hot with scattered thunder showers over South-soybean acreage double last year causing

SOUTHEASTERN STATES(continued)

Georgia(continued) - ern Georgia and heavy. Stores were light, although build- hot and dry latter part of month in Northern Georgia.

In Southern Georgia pepper bush and Mexican clover will be available in Sep-Honey plants were in good condition tember. North Georgia goldenrod and asters were in bloom and bees are busy

> Pesticides damage reported heavy with heavy bee kill from insecticide spray.

TERMINAL MARKET REPORTS

Market prices (sales or quotations as indicated under each city) shown below were obtained from local brokers, packagers, wholesalers and other receivers in the respective cities. Current quotations are shown for markets where sales for the period could not be obtained. Sales are usually subject to a one percent(1%) discount if payment is made within 10 days. Comments on market conditions reflect the opinion of the local trade for the month of August. Sixty pound cans are on a per pound basis and smaller units of honey are on a per case basis unless otherwise stated: Beeswax prices are per pound.

MONTHLY REPORT

UNITED STATES DEPARTMENT OF AGRICULTURE

AGRICULTURAL MARKETING SERVICE Fruit and Vegetable Division 2503 S. Agriculture Bldg., Washington, D.C. 20250

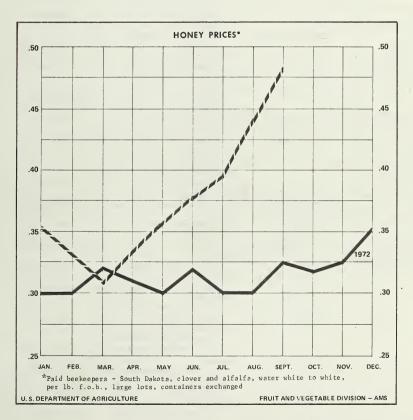

Vol. LVII No. 9

Wednesday, October 10, 1973

SEPTEMBER HIGHLIGHTS

United States Honey Exports sharply higher, imports sharply lower, compared to last year.

Honey prices were slightly higher in most states. Many beekeepers had sold-out of honey. The flow from Goldenrod was heavy in late August and early September.

National Agricultural Library
Bee Culture Branch, Bldg. A
Agricultural Research Center
Beltsville, Marvland 20705

Prices represent sales reported by correspondent beekeepers and honey handlers. Because of the many thousands of beekeepers and handlers in the country, prices should be considered as representative and not as complete coverage of transactions for any state or area.

FOOTNOTES FOR PAGES 2-5

1/ State or origin indicates where packed, not necessarily where produced. The term "clover" includes most legumes such as white dutch clover, yellow, white sweet clover and occasionally such legumes as alfalfa and vetch mixed with other clover.
2/ Containers exchanged. 3/ Containers included.

NOTE: F.o.b. as used means delivered free of charge on the means of conveyance;

Del. means delivered to receiving or distribution points, less transportation and other costs from shipping points.

REARING QUEENS

Source by: Agriculture Handbook No. 335

For the amateur who desires to rear a few queens, many methods are available. Most of them are described in the references at the end of this section. For those desiring to rear less than 20 queen cells at one time and not more than 50 queens during a season, we suggest the following procedure: Select the best colony as a breeder to produce the queen cells. Rear them after the main honey flow is over by two easy manipulations.

First, remove the queen with one frame of brood and two frames of honey with adhering bees to a hive body in another location. The queenless colony will start a dozen or more queen cells within 24 hours. These will be produced throughout the brood nest. Cut out and save the largest and most uniform cell. Be sure that the cell selected is not damaged. Destroy all unused cells. Return the queen and three frames to the center of the brood nest of the parent colony. If the bees are not robbing, there will be little change of losing the queen by this method.

Finally, make an additional colony or nucleus by again removing from another colony three frames of brood, honey, and adhering bees. Gouge a cavity near the top of the center comb about 3/4 inch wide and 1 1/2 inches long. Gently press the queen cell into it so the queen will have room to emerge from the cell tip. Replace the comb and leave the new hive closed for 2 weeks. Repeat this process for each queen desired. Continued on page 13

CALIFORNIA POINTS

Colony conditions were generally very good for wintering with ample stores of honey and pollen and good populations of young bees. Brood rearing was down considerably the last two weeks of September In some instances, brood areas were being filled with honey. A good fall flow of blue curls, tarweed, and other late fall flowers was reported.

Very little spray damage had been reported. Bees were being moved from cotton due to defoliation and in the desert areas away from carrots, lettuce, onions, and other crops to prevent spray damage.

The number of colonies to be wintered in the various areas ranged from 10% below to 10% above year ago, with most areas indicating approximately the same number of colonies as a year ago. Colony movement was limited. Some were being moved to late fall flowers including tarweed, blue curls, tamarisk, and salt cedar. Most movement was to winter location. Honey plant condition was generally normal throughout the State. Bloom of fall plants was much better in most areas than during a smaller period the two years. The fall plant area becomes much smaller each year because of land development. During September, bees worked blue curls, tarweeds, pastures for clover, oak honeydew, late star thistle, tamarisk, salt cedar, mesquite, late cotton and alfalfa, and other wild flowers.

NORTH PACIFIC STATES

Oregon - Producers were beginning to extract honey. Yields are about normal in most areas, although one beekeeper estimated crop at half of normal. Necter flow was poor during the long summer draught. Some colonies were damaged by insecticide spray, although bee population was moderate in most yards. Stores were light. Yellow jackets and hornets caused problems to honey bees in a few areas.

Honey plants were in poor condition due to the extended dry weather. Recent rains are expected to improve honey plant conditions.

<u>Washington</u> - Offerings of honey were light The demand was good and the market was slightly stronger.

Colonies were in fairly good condition. Bee population was moderate and stores were light, but continued to build up. Very few honey plants were yielding due to dry weather.

INTERMOUNTAIN STATES

<u>Idaho</u> - Offerings of honey were light. The demand was good and the market about steady.

INTERMOUNTAIN STATES (continued)

Idaho (continued) - One of the beekeepers reported bees in poor condition due to the heavy damage from daytime spraying of alfalfa. Bee populations were light.

Montana - Offerings of honey were light. The demand exceeded the supply and prices were higher.

Colonies were in good condition Bee population was heavy and stores were ample. Bees worked wild flowers.

Honey plants were in fairly good condition where soil moisture was normal, but in poor condition in many areas due to dry weather.

 $\underline{\text{Nevada}}$ - Offerings of honey were moderate. The demand exceeded the supply and the market was slightly higher.

Colonies were in good condition with bee population moderate and stores ample. Bees worked wild flowers and rabbit brush. Colonies were being moved out of alfalfa seed fields to winter locations.

Honey plants were in good condition with soil moisture normal.

SOUTHWESTERN STATES

Arizona - Offerings of honey were light. The demand exceeded the supply and prices were higher.

Colonies were in poor condition. Bees were damaged from pesticide spraying of cotton. Bee population was light. Stores were ample and bees worked cotton.

Honey plants were in poor condition due to dry weather. No measurable rain has been reported in the Phoneix area for well over two months.

 $\underline{\text{Oklahoms}}$ - Offerings of honey were light. The demand was good and the market steady.

Colonies were in fairly good condition. Bee populations were moderate and stores ample in most yards. Bees worked wild flowers and some cotton.

Honey plants were in good condition with soil moisture ranging from normal to above normal.

Texas - Offerings of honey were light.
The demand exceeded the supply and the
market was slightly higher.

Colonies were in good condition. Bee population was moderate and stores were ample. Bees worked wild flowers and broomweed. Insecticide damaged bees in a few locations.

Honey plants were in good condition with soil moisture above normal in most sections.

PLAINS STATES

<u>Iowa</u> - Offerings of honey were moderate. The demand was good and the market slightly higher.

PLAINS STATES (continued)

Iowa (continued) - Colonies were in fairly good condition. Bee population was moderate and stores were ample in most yards.

Honey plants were in good condition with soil moisture above normal.

Missouri - Offerings of honey were light. The demand was good and the market steady.

Colonies were in good condition with bee population, heavy. Stores were ample. Bees worked wild flowers.

Honey plants were in very good condition with soil moisture above normal.

Nebraska - Offerings of honey were moderate. The demand was good and the market higher.

Colonies were in fairly good condition.normal. Bee population was heavy. Stores ranged from light to ample.

One beekeeper reported that honey crop market steady. was irregular over the state with yields generally below average and ranging from 60-80 pounds per colony.

Honey plants were in good condition with soil moisture normal.

North Dakota - Offerings of honey were moderate. The demand was good and the although soil moisture was below normal. market steady.

with bee population moderate Stores were light. Bees worked wild flowers.

Most honey plants were killed by frost very good with a heavy body and light color. the last two weeks in September. Soil moisture was below normal.

South Dakota - Offerings of honey were higher. moderate. The demand was good and the market slightly stronger.

with bee population heavy and stores ample. Bees fed only a few late producing flowers. Bees worked alfalfa.

Honey plants were in poor condition due to soil moisture being 4-7 inches below areas. normal.

CENTRAL STATES

Illinois - Offerings of honey ranged from light to moderate. The demand was good and the market steady.

Colonies were in good condition. Bee population was moderate and stores were ample in most yards. Bees worked wild flowers. Some insecticide spraying was reported in the Northern portion of the State and colonies were heavily damaged in these areas.

Most honey plants had finished producing, although were in good condition. Soil moisture was normal.

CENTRAL STATES (continued)

Indiana - Offerings of honey were light. The demand was good and the market slightly higher.

Colonies were in good condition. Bee population was heavy and stores were ample. Bees worked goldenrod, aster, smartweed and wild flowers.

The summer clover flow was almost a complete failure. Many beekeepers were concerned about winter stores. But in early September, many beekeepers discovered they had received a fairly good late flow from goldenrod. Some beekeepers estimate this flow at about 35-40 pounds per colony.

Honey plants were in fairly good condition but were drying up the latter part of September. Soil moisture was below

Michigan - Offerings of honey were moderate. The demand was good and the

Colony conditions were fairly good with bee population ranging from moderate to heavy. Stores were ample. Bees worked wild flowers and goldenrod. Yields were expected slightly above normal in most areas.

Honey plants were in good condition,

Minnesota - Most producers had Colonies were in fairly good condition finished extracting honey. Early indication are that yields will be slightly above last season. The quality of honey was reported

> Offerings of honey were moderate. The demand was good and the market slightly

Colonies were in good condition. Bee population ranged from moderate to Colonies were in fairly good condition heavy. Stores were ample in most yards. Most honey plants were in good con-

dition. Soil moisture was normal in most

Ohio - Beekeepers were extracting honey. The irregular yields were reported. Central and Southern sections of the State reported yields below normal, while other parts reported a heavy fall flow.

Offering of honey were light. The demand was good and market slightly

Colonies were in good condition with bee population ranging from moderate to heavy. Stores were ample. Bees worked goldenrod, aster and wild flowers.

Honey plants were in good condition with soil moisture normal in most areas.

Wisconsin - Many beekeepers were in the process of extracting honey. Early indications are that yields will be so much above last year.

8

CENTRAL STATES (continued)

Wisconsin (continued) - Offerings of honey were moderate. The demand was good and the market slightly stronger.

Colonies were in good condition. population ranged from moderate to heavy and stores were ample. Bees worked golden- slightly higher. rod, aster and a few other wild flowers.

Honey plants were in good condition. Some areas was reported moisture below normal, others above normal.

NORTHEASTERN STATES

Connecticut - No honey market conditions were reported, except one beekeeper reported a good demand.

Colonies were in good condition with bee population moderate and stores ample. Bees worked wild flowers.

Honey plants were in good condition with soil moisture above normal.

moderate. The demand was good and the market steady.

with bee population ranging from moderate to heavy and stores generally ample. Bees worked wild flowers.

Honey plants were in good condition with soil moisture above normal.

Beekeepers reported a very poor spring and summer flow, although August and September flows were generally above normal.

New Jersey - Offerings of honey were light. The demand exceeded the supply and prices were slightly higher.

Colonies were in good condition with bee population moderate to heavy and stores ample. Bees worked wild flowers.

Honey plants were in good condition. Soil moisture was above normal in some areas and below normal in others.

A very good demand was reported for bees wax.

New York - Many beekeepers were busy extracting honey. Early indications are that yields will be slightly above last year.

Offerings of honey were moderate, the demand was good and the market steady.

Colonies were in good condition. Bee population was moderate to heavy and stores slightly stronger. generally ample. Bees worked wild flowers.

Honey plants were in good condition with soil moisture ranging from normal to above normal.

market slightly stronger.

Colony conditions were fairly good with bee population ranging from moderate to Additional moisture would be helpful heavy. Stores were ample. Bees worked

goldenrod and were beginning to work aster. The flow from goldenrod was expected above normal.

NORTHEASTERN STATES (continued)

Pennsylvania (continued) - Honey plants were in good condition. moisture was normal in most areas.

Vermont - Offerings of honey were light. The demand was good and the market

Colonies were in good condition with bee population moderate and stores ample. Honey plants were in good condition with soil moisture normal.

SOUTH ATLANTIC STATES

Kentucky - Offerings of honey were light. The demand exceeded the supply and the market was slightly stronger.

Colonies were in good condition. Bee population was moderate and stores were building up. Bees were working goldenrod and aster.

Honey plants were in very good con-Massachusetts - Offerings of honey weredition with soil moisture normal in most areas.

Maryland - Offerings of honey were Colonies were in fairly good condition light. The demand was good and the market slightly higher.

Colonies were in fair condition. Bee population was moderate. Stores were light. Some colonies barely maintained their weight during August and early September. Those bees moved to lima bean areas on the Eastern Shore stored heavy amounts in the brood chamber and wintering super. These colonies were in excellent condition for winter. Most colonies in other areas were very light on stores, and wintering will be difficult. Bees worked some aster.

Honey plants were in good condition with soil moisture normal.

North Carolina - The demand for honey exceeded the light supply. The market was higher.

Colonies were in fairly good condition with bee population moderate. Stores were light. Bees worked goldenrod, and were beginning to work aster. A good honey flow was needed for winter storage.

Honey plants were in poor condition. Soil moisture was below normal in many areas. Tennessee - Offerings of honey were

light. Demand was good and the market

Colonies were in good condition with bee population heavy. Stores were ample in most yards. Bees worked wild flowers. Goldenrod was the best source of honey in Pennsylvania - Demand was good and the September. Aster was beginning to bloom.

Honey plants were in good condition with soil moisture normal in most areas.

SOUTHEASTERN STATES

<u>Florida</u> - Offerings of honey were light. The demand was good and the market slightly higher.

Colonies were in fairly good condition. Bee population ranged from moderate to heavy. Stores were light. Bees worked wild flowers.

Honey plants were in poor condition, although soil moisture was normal in most areas.

<u>Georgia</u> - Offerings were light, most beekeepers had sold honey. The demand was good and the market slightly stronger.

Colony conditions ranged from average to very poor. Many colonies are expected to require supplemental feeding during winter months. Some pesticide damage was reported. The heaviest damage was in soybean growing areas. Bees worked Mexican clover, goldenrod and partridge pea.

Honey plants were in good condition with soil moisture normal in most areas.

SOUTHEASTERN STATES (continued)

<u>Louisiana</u> - Honey prices were higher. Colonies were in fairly good condition with bee population moderate and stores ample.

Honey plants were in good condition with soil moisture normal.

Mississippi - One beekeeper reported a poor honey crop due to escessive rain and heavy insecticide damage to bees. Honey plants were in poor condition.

No report was made on honey market or colony conditions.

TERMINAL MARKET REPORTS

Market prices (sales or quotations as indicated under each city) shown below were obtained from local brokers, packagers, wholesalers and other receivers in the respective cities. Current quotations are shown for markets where sales for the period could not be obtained. Sales are usually subject to a one percent (1%) discount if payment is made within 10 days. Comments on market conditions reflect the opinion of the local trade for the month of September. Sixty pound cans are on a per pound basis and smaller units of honey are on a per case basis unless otherwise stated: Beeswax prices are per pound.

honey production

Commercial apiaries with 300 or more colonies in the 20 major honey producing States expect to produce 116 million pounds of honey in 1973, according to the Crop Reporting Board. This is 3 percent less than the Commercial Production in 1972 but 1/5 greater than in 1971. Commercial apiaries had 1,572,000 colonies of bees in 1973 compared with 1,630,000 a year ago and 1,605,000 in 1971. Yield per colony for the 20 major States is expected to average 74 pounds, up slightly from 1972 but 14 pounds more than in 1971.

Commercial production in California is expected to be 17,490,000 pounds, down one-sixth from last year, due to fewer colonies of bees. South Dakota production, at 12,688,000 pounds, is expected to be a tenth below last year. Number of colonies of bees is up slightly but yield per colony is expected to be off 20 pounds from last year. In Florida, both number of colonies and yield per colony are expected to be up slightly from a year ago, resulting in a 6 percent increase in commercial production to 13,328,000 pounds in 1973.

In California, colonies have been in good to excellent condition. In 1973, honey flow has been good, particularly on buckwheat in southern areas. Flow on citrus and other fruits has been somewhat disappointing. In the Plains States, summer weather has been dry. damaging honey plants and decreasing production.

Colonies of bees and commercial honey production in 20 major producing States, 1971-73 1/

*Reported by beekeepers on September Honey Market Inquiry.

Continued from page 5

The commercial queen breeder does not use this inefficient method. He transfers female larvae from worker cells into artificial queen cell cups and uses special queenright or queenless cellbuilding colonies to rear them. By this method hundreds of cells can be produced continuously.

MONTHLY REPORT

UNITED STATES DEPARTMENT OF AGRICULTURE

2503 S. Agriculture Bldg., Washington, D.C. 20250 Fruit and Vegetable Division

Vol. LV11 No. 10

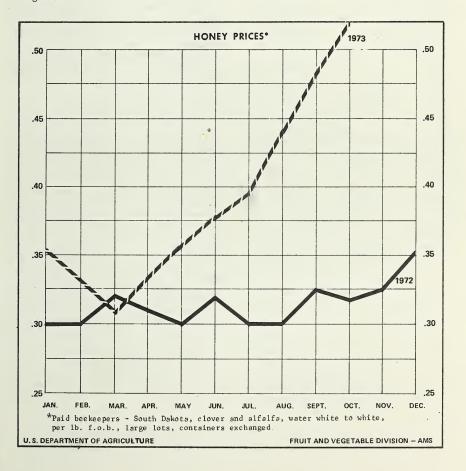

Monday, November 12, 1973

OCTOBER HIGHLIGHTS

Above normal temperatures and clear skies permitted bees to work late producing honey plants in many states during most of October. Colonies were generally in good condition for winter.

A good fall flow was reported in several states. Extracting was complete in most areas.

Honey prices were slightly higher in many states. Offerings of honey were light. Most beekeepers had sold honey. Export and domestic demand continued good.

HONEY PRICES REPORTED DURING OCTOBER

Prices represent sales reported by correspondent beekeepers and honey handlers. Because of the many thousands of beekeepers and handlers in the country, prices should be considered as representative and not as complete coverage of transactions for any state or area.

COLONY, HONEY PLANT AND MARKET CONDITIONS DURING OCTOBER

85¢ del.

CALIFORNIA POINTS

NEBRASKA Yellow

Colonies are in good to excellent condition for wintering in most areas of the state. Stores of both honey and pollen are plentiful; partly because of good fall flows from blue curls, tarweed, and other wild flowers. Clusters are mostly of young bees. Broodrearing has diminished to a small area in most locations.

Beekeepers report the colony numbers to be wintered from slightly above to slightly below a year earlier. Averaging near the same as a year earlier. In the queen and packaged bee shipping areas, 75 percent or more of the colonies are going into winter with young queens. In other areas of the state the percentage of young queen ranges down to 20 percent this year's queens.

Movement of colonies during October was mostly to winter holding areas, though some were moved to almond pollination locations. Only a few honey plants were still available to bees. Scattered blue curls, pastures, some mustard, and miscellaneous wild flowers were producing small amounts of Nectar and Pollen. Colorado - Colorado - Colorado -

NORTH PACIFIC STATES

Oregon - Beekeepers were busy extracting honey during October. The late flow was good in most high areas. Colonies were in winter quarters, and in very good condition.

<u>Washington</u> - Temperatures were mild the first half of October and cooler the second half with nighttime temperatures in the low 30's.

Offerings of honey were light. The demand was good and the market slightly stronger.

Colonies were in fair condition. Bee population was light and stores ranged from light to ample. Most bees were being moved into winter quarters. Number of colonies going into California increased for almond pollination; and because winters are milder in California which helps to build colonies over the winter months.

Honey plants were dormant. Soil moisture was below normal in most areas. ENTERMOUNTAIN STATES

<u>Colorado</u> - Offerings of honey were moderate.

INTERMOUNTAIN STATES (Continued)

Colorado - The demand was good and the market steady. Colonies were in fairly good condition with bee population ranging from moderate to heavy. Stores were ample in most vards.

Honey plants were in good condition, although dormant. Soil moisture was below normal in some areas and about normal in others.

Idaho - Offerings of honey were moderate.
The demand was good and the market steady.

The general condition of colonies was about average. Bee population was moderate and stores were ample. Bees were in winter quarters.

Honey plants were in good condition with soil moisture normal in most areas.

Montana - Offerings of honey were light. The demand was good and the market steady.

Colonies were in good condition with bee population ranging from moderate to heavy. Stores were ample.

Honey plants were in good condition in most areas, althought soil moisture was below normal.

Nevada - Offerings of honey were light and the demand was good. Prices were slightly higher.

Colonies were in good condition with bee population moderate and stores ample. Bees were dormant.

Honey plants were in good condition, although dormant. Soil moisture was below

Wyoming - Honey prices were steady, Offerings continued light with the demand exceeding the supply.

Colonies were in good condition with bee population heavy. Bees were going into winter quarters with ample feed; however, due to above normal temperatures, populations are larger than normal and will consume stores more rapidly.

Honey plants were dormant. Soil moisture was below normal in most areas.

SOUTHWESTERN STATES

Arizona - Offerings of honey were light. The demand exceeded the supply at slightly higher prices.

Colonies were in poor condidion. Bee population and stores were light. Bees worked some cotton.

Honey plants were in poor condition with soil moisture much below normal.

Oklahoma - Offerings of honey were light. Some beekeepers in the southeast Oklahoma reported only one-third of a normal crop of honey. Demand for honey was good and the market steady.

SOUTHWESTERN STATES (Continued)

Oklahoma (Continued) - Colonies were in fairly good condition. Bee population ranged from moderate to heavy and stores were ample in most yards. Bees worked wild flowers.

Honey plants were in good condition with soil moisture normal in most areas.

Texas - Offerings of honey ranged

from light to moderate. The demand exceeded the supply and the market was slightly higher. Many beekeepers had sold all honey.

Colonies were in good condition. Bee population ranged from moderate to heavy and stores were ample in most yards. An above average fall honey flow was reported from Broomweed, Goldenrod and Aster.

Honey plants were in very good condition with soil moisture above normal.

PLAINS STATES

Iowa - Offerings of honey were moderate the demand was good and the market slightly higher.

Colonies were in fairly good condition with bee population moderate and stores ample. Bees were dormant. Extracting of honey was nearly finished with an average crop reported.

Missouri - Prices were steady for honey. The demand was good. Colonies were in good condition with bee population heavy and stores ample.

Honey plants were in very good condition with soil moisture above normal.

Nebraska - Offerings of honey were

Mebraska - Offerings of honey were moderate. The demand was good and the market slightly higher.

Colonies were in fairly good condition with bee population heavy and stores ample. Some beekeepers were concerned about population being too heavy. The honey crop was estimated slightly below last year. Several thousands colonies are being moved out of the state to winter quarters in Texas and California.

Honey plants were in good condition in most areas with the soil moisture above normal.

<u>South Dakota</u> - Offerings of honey were light and the demand good. Prices were slightly higher.

Colonies were in good condition with bee population heavy and stores ample. Bees were dormant.

Honey plants were in good condition with soil moisture above normal in eastern South Dakota. No report from other areas.

CENTRAL STATES

Illinois - Offerings of honey were light. The demand was very good and the market steady.

Colonies were in fairly good condition. Bee population was moderate and stores were ample in most yards. The fall flow from Aster, Goldenrod and other fall flowers was light due to rain. Beekeepers are expecting early feeding.

Honey plants were dormant. Soil moisture ranged from normal to above normal.

Indiana - Offerings of honey were light. The demand was good and the market steady. Colonies were in good condition. The bee population was heavy and stores were

ample. Bee were dormant.

Honey plants were in fairly good condition, although dormant during latter part of although dormant in most areas. Soil moisture was below normal.

Michigan - Colonies were in good condition. Bees worked Aster and most colonies have plenty of winter stores. The latter part of October was cold and wet. Honey flows are over for the season. Soil moisture was normal.

Minnesota - Offerings of honey were light. The demand exceeded the supply and the market was slightly stronger. Extracting was completed. Yields were expected less than last year, primarily because bees were killed by spray during main flow.

Colonies were in fairly good condition. Bee population ranged from moderate to heavy and stores were ample in most yards. Warm weather caused bees to use above normal stores.

Honey plants were in good condition, although dormant. Soil moisture was normal.

Ohio - Offerings of honey were light. The demand was good and the market steady.

Colonies were in good condition. Bee population was moderate to heavy and stores ample. Extracting was underway and early indications were that crop would be larger than last year. A fairly heavy flow was reported from Goldenrod and Aster.

Honey plants were in good condition with soil moisture normal.

Wisconsin - Offerings of honey were moderate. Demand ranged from fair to good. Prices were about steady.

Colonies were in good condition. population ranged from moderate to heavy and stores were ample in most yards. Honey for winter feeding ranged 180-200 pounds per hive in most areas.

Honey plants were dormant, but in good condition with soil moisture normal.

NORTHEASTERN STATES

Connecticut - Offerings of honey were moderate. The demand was good and the market steady.

Colonies were in good condition with bee population moderate and stores ample. Bee worked will flowers early in October, but honey plants were dormant late in month. Soil moisture was normal.

Massachusetts - Offerings of honey were moderate. The demand was good and the market steady.

Colonies were in fairly good condition. Population was heavy and stores were building-up. Bees worked wild flowers early in the month.

Honey plants were in good condition, October. Soil moisture was normal.

New Jersey - Offerings of honey were moderate. The demand exceeded the supply and the market was slightly higher.

Colonies were in good condition. population was moderate and stores were ample. Bees worked some wild flowers.

Honey plants were in good condition, although soil moisture was below normal in most areas.

New York - Offerings of honey were light. The demand was good and the market about steady.

Colonies were in fairly good condition. Bee population was moderate to heavy and stores were generally ample. Fall honey flow was over, and beekeepers were getting hives ready for winter months.

Honey plants were in good condition with soil moisture normal.

Pennsylvania - Offerings of honey ranged from light to moderate. The demand was good and the market steady.

Colonies were in good condition. Bee population ranged from moderate to heavy and stores were ample. One beekeeper reported no increase in population due to irregular summer weather.

Honey plants were dormant late in October, but apparently in good condition. Soil moisture was below normal in some areas and above normal in others.

<u>Vermont</u> - Offerings of honey were oderate. The demand was good and the moderate. market higher.

Colonies were in fairly good condition with bee population moderate and stores

Honey plants were dormant. Soil moisture was normal.

SOUTH ATLANTIC STATES

<u>Kentucky</u> - Offerings of honey were moderate. The demand was fair and the market steady.

SOUTH ATLANTIC STATES (Continued)

Kentucky - (Continued) Colonies were in fairly good condition. Bee population was moderate and stores ranged from light to ample. The fall Aster flow was poor. Beekeepers reported a good 1973 honey crop. Bees are going into winter quarters in excellent condition in most areas.

Honey plants were in good condition, except dormant, late in October. Soil moisture ranged from below normal to normal.

North Carolina - The weather during October was dry with cool nights and warm day. Bees stored ample supplies of Goldenrod and fall Aster during October. Bee population was moderate.

Offerings of honey were moderate. The demand exceeded the supply at steady prices.

Tennessee - Offerings of honey were light. The demand was good and the market steady.

Colonies were in good condition. Bee population was moderate to heavy and stores ample in most yards. Bees worked Goldenrod and a few other wild flowers. Most colonies should not need supplemental feeding this winter.

SOUTH ATLANTIC STATES (Continued)
Tennessee - (Continued)

Honey plants were in fairly good condition. The first frost was reported on October 18. Soil moisture was normal.

<u>Virginia</u> - Offerings of honey were very light. Prices were slightly higher. The condition of colonies was variable. Bee population was moderate. Stores were light in some yards and ample in others. Soil moisture was normal. SOUTHEASTERN STATES

Florida - Offerings of honey were light. The demand was good and the market about steady.

Colonies were in good condition. Bee populations ranged from moderate to heavy, and stores from light to moderate. Bees worked wild flowers.

Honey plants were in good condition with soil moisture normal.

Georgia - The weather was mild and dry during October. No surplus fall honey was made. Bee population ranged from light to moderate. Early supplemental feeding will probably be necessary.

Offerings of honey were light. The demand was good and the market unchanged. Honey plants were in good condition, although soil moisture was below normal.

TERMINAL MARKET REPORTS

Market prices (sales or quotations as indicated under each city) shown below were obtained from local brokers, packagers, wholesalers and other receivers in the respective cities. Current quotations are shown for markets where sales for the period could not be obtained. Sales are usually subject to a one percent (1%) discount if payment is made within 10 days. Comments on market conditions reflect the opinion of the local trade for the month of October. Sixty pound cans are on a per pound basis and smaller units of honey are on per case basis unless otherwise stated: Beeswax prices are per pound.

BOSTON: Demand good. Market steady. Arrivals 133,000 pounds white clover--Sales to wholesalers, chains and other large users---

White Clover

1/ The terms C&F and CIF sometimes include points in addition to Hamburg, such as Bremen, Rotterdam or Europe. Terms FOB are usually from port nearest origin in source country.

1.16

1.16-1.20

2/"MT" means "metric ton" (2,204.62 pounds); "LT" means "long ton" (2,240 pounds); "Kgs"

means "kilograms" (2.2046 pounds).

 $\underline{3}/$ Quotaions stated in money units of offering countries have been converted to U.S.

dollar equivalents. "No" means "No Offer."

CIF 100 Kgs

4/ "Dlvry" means "Delivery period." Symbol meanings are: J-F =Janary-February, F-M = February-March, M-A = March-April, A-M = April-May, M-J = May-June, M-JJ = May-July, J-J = June-July, JJ-A = June-August, J-A = July-August, A-S = August-September, S-O = September-October, O-N = October-November, N-D = November-December, D-J = December = January, P = Prompt, P-JJ = Prompt-July, etc.

HONEY LABELING LAW

A new California honey labeling law was signed by the Governor in September that provides, "Honey may not be labeled honey or words of similar import or represented to be honey unless manufactured by bees. No product may be labeled imitation honey or words of similar import or represented to be imitation honey." This law was reportedly patterned after a similar law enacted in Arkansas in March which states, "An act to make it unlawful to package and label any product as honey or sell or offer any product for sale as 'honey' which is not pure honey."

MANAGING COLONIES FOR HIGH HONEY YIELDS

(Source: Agricultural Research Service, USDA)

Preparing Colony for Winter

Population

The strength of a colony of bees is relative and difficult to describe. A "strong" colony to one beekeeper might be "weak" to another. Colonies with less than 10 pounds of bees should be united to stronger ones or several weaker ones combined. At between 40° and 50° F., 10 pounds of bees will cover practically all the combs of a three-story hive wall to wall and top to bottom. Naturally as the temperature drops the cluster will contract.

The beekeeper must see that at no time is the available space for brood rearing reduced because of overcrowding with honey from the fall flow. A balance must be maintained between crowding the colony to get the brood chambers well filled with honey and adding space to relieve brood rearing restriction. Partially filled supers kept on colonies in the fall may be necessary. Any subnormal colony should not be overwintered, but should be united with another colony.

A colony may appear to have an adequate fall population, but if the bees are old, it will weaken rapidly as winter advances and may starve to death, even with abundant honey in the hive, because the cluster is too small to cover the honey stores.

Food Reserves

The colony should have a minimum of 500 square inches of comb filled with pollen in the fall. To insure uninterrupted brood rearing in late winter and early spring, the beekeeper may need to supplement this. The average colony of bees under intensive management may consume about 60 pounds of honey between the last fall flow and the first available food from the field in the spring. A weak colony may consume 20 pounds or less, but the very best colony will consume 80 pounds or more. To insure the survival of the top quality colony, 90 to 100 pounds of honey should be left on it in the fall. A colony of bees not rearing brood will consume an average of about one-eighth pound of honey per day of 5 pounds per month. When brood rearing begins, the consumption of honey is greatly accelerated. Brood rearing should commence in midwinter and accelerate as temperatures moderate in late winter and early spring.

When brood rearing is discouraged or curtailed, the colony will consume less winter stores but will emerge in the spring much weaker and with a population of primarily old bees. Such colonies will have difficulty replacing the small amount of honey

Organization

To accommodate the best queens in standard Langstroth 10-frame hives, a minimum of two hive bodies and preferably three should be used for year-round management. In the fall most of the honey should be located in the top hive body. With experience the beekeeper can soon learn to estimate the weight of hive bodies or frames by lifting them. A frame full of honey should weigh approximately 5 pounds. The top hive body should contain 40 to 45 pounds of honey. This means that all frames in the top hive body will be full of honey except for two or three frames in the center. The second body should contain 25 to 30 pounds of honey and some pollen. The bottom hive body should contain 20 to 30 pounds of honey plus pollen. If in the fall the combs in the top hive body are not filled, the beekeeper should reorganize them and if necessary feed additional sugar sirup so that this top hive body is well filled with stores.

As the winter progresses the cluster of bees will shift its position upward as the stores are consumed. A colony of bees in a cold climate can starve with abundant honey in the hive if the

honey is below the cluster.

With the advent of cold weather, the bees cluster tightly in the interspaces of the combs. Usually there are no bees in the bottom part of the hive near the entrance. For this reason an entrance cleat or reducer should be used to exclude mice. One-inch auger holes drilled into the hive bodies of the brood nest just below the handholds are helpful. In late summer these auger-hole entrances are closed with corks so that the bees will fill the combs near them. During winter the top auger-hole entrance should be open. This allows the escape of moisture-laden air and affords a flight exit for the bees during warm spells. (Fig. 2.)

Packing the Hive

Many beekeepers in the coldest parts of the country consider that some form of protection around the hive is essential. Others believe that colonies with strong populations and ample stores need no further protection. Factors to consider in deciding whether or not to pack are the cost of material and labor and any savings in honey or bees. Packing will not replenish colonies deficient in honey, pollen, or bees, replace poor queens, or cure bee diseases. Packed colonies will consume slightly less honey. However, the difference is negligible. The most important consideration in preparing colonies for winter is a strong population and adequate stores.

Vol. LV11 No. 11

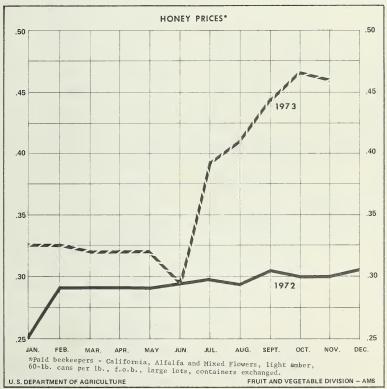

Thursday, December 6, 1973

NOVEMBER HIGHLIGHTS

Colonies in most states were in generally good condition. many nothern states were being wrapped and prepared for winter, beekeepers were wintering over a larger than normal number of bees because of a feared shortage of package bees and queens in the spring.

Due to unseasonally warm temperatures bees in many areas were using winter stores at a higher rate than desired.

The honey market was steady in most states and slightly higher in others. Offerings were quite light with many beekeepers being sold out.

CALIFORNIA POINTS

As a result of above normal rainfall in northern California honey plants are off to demand was good. The market was steady. a good start for the upcoming season. Although the weather has been cool and windy at times, bees have been able to find some flying time. In the southern half of the State rainfall has been normal, Occasional rain and cold weather slowed apiary activity but bees were still able to work some late blooms.

Colonies continue in good to excellent condition. Some feeding has been started, mostly to assure strong colonies for almond pollination. Broodrearing is at a near standstill in most sections, which is normal for this time of year.

Movement of colonies into the State was rather active during November. Colonies were moved in from Washington, Oregon. Nevada, Utah, Montana, Idaho, South Dakota and Nebraska. Most movement has been to winter holding areas though a few colonies have been placed in almond orchards. Some colonies have been moved to off-bloom citrus and south coastal eucalyptus locations. Some mustard, off-bloom lemons, endalyptus, rabbit weed, wireweed, and other wild flowers are being worked when the weather permits. Most of the bloom is to be found in southern California.

Citrus and eucalyptus still show effects of the December 9-11, 1972 freeze but eucalyptus is seemingly budding well in some areas.

NORTH PACIFIC STATES

Oregon - Offerings of honey were light. The demand was fair and the market was steady.

Washington - Offerings were moderate. Demand was very good and market prices were steady.

Colonies were in generally good condition although bee populations and stores were spotty from light to heavy.

Honey plants were dormant, although in fair to good condition. Soil moisture ranged from below normal to normal.

INTERMOUNTAIN STATES

Colorado - Offerings of honey were moderate. The demand was good and the market steady.

Colonies were in average condition with moderate bee populations. Honey stores were ample.

Honey plants were dormant and in poor to good condition. Soil moisture was about normal.

INTERMOUNTAIN STATES (continued)

Idaho - Offerings were moderate and Colonies were in average condition and bee populations were moderate. Stores were ample although there was some supplemental feeding of sugar syrup.

Honey plants were in good condition and dormant. Soil moisture was normal.

Montana - Offerings of honey were fairly light. Demand was very good and the market was unchanged to slightly higher.

Colonies were in generally good condition. Bee populations were moderate to heavy and honey stores were ample. Honey plants were dormant and going

into the winter in poor to fair condition. Soil moisture was below normal in may areas and ranged to normal in some other areas.

Nevada - Demand was good for very light offerings.

Colonies were in good condition. populations were moderate and honey stores were ample.

Honey plants were in good condition and soil moisture was normal.

Wyoming - Nearly all honey has been sold due to very good demand this fall.

Colonies were in average condition. Bee populations were heavy and stores were ample.

Soil moisture was below normal, although this improved somewhat during the month. Most beekeepers were planning a moderate increase of colonies next year.

SOUTHWESTERN STATES

Arizona - Offerings were light. demand was good and the market was slightly weaker.

Colony conditions were below average with light bee populations. Honey stores were light, although bees were able to work a little cotton.

Honey plants were in poor condition and soil moisture was below normal.

Oklahoma - Offerings of honey were very light with many beekeepers sold out. The market was steady.

Colonies were in fair to average condition. Bee populations were light to moderate. Stores were variable from ample to light with some requiring supplemental feeding.

Honey plants were dormant and in fairly good condition. Soil moisture was normal.

SOUTHWESTERN STATES (continued)

Texas - Offerings of honey were very light. Demand was good to exceeds supply and the market was generally steady.

Colonies were in average to good condition. Bee populations were moderate and honey stores were generally adequate.

Honey plants were in good condition and weather in early November. soil moisture was above normal. Michigan - Offerings o

PLAINS STATES

<u>Iowa</u> - Offerings of honey were light. bee po Demand was good and the market was steady, ample.

Colony conditions were good. Bee populations were moderate to heavy and honey stores were ample. There was several reports that colonies averaged around 110 pounds per colony after leaving ample supplies for winter.

Plant conditions were good and soil moisture was above normal.

<u>Kansas</u> - Offerings of honey were light. Demand was good and the market was steady.

Colonies were in good condition and bee populations were moderate. Honey stores were ample for the winter.

Honey plants were in fairly good conditions and soil moisture was above normal.

<u>Missouri</u> - Offerings of honey were light. Demand was good and the market was steady.

Colony conditons were good. Bee populations were heavy and stores were ample.

Honey plants were in very good condition and soil moisture was above normal.

<u>Nebraska</u> - Offerings of honey were moderate. Demand was good and the market was steady.

Colonies were in good condition and bee populations were heavy. Stores were ample, although light colonies were being given supplemental feeding of sugar syrup.

Honey plants were in good condition with soil moisture above normal.

CENTRAL STATES

<u>Illinois</u> - Offerings of honey were fairly light and demand was very good. Prices were generally unchanged from last month.

Colonies were in good condition and bee populations were moderately heavy. Stores were ample in most areas although there was some reports that early feeding of sugarboards and dry sugar would be needed.

Honey plants were dormant and ranged from poor to very good condition. Soil moisture was normal to above normal.

CENTRAL STATES (continued)

<u>Indiana</u> - Offerings of honey were light, demand was fairly good and prices were steady to slightly higher.

Colonies were in good condition with heavy bee populations. Stores were ample although there was some areas that had dry weather in early November.

 $\underline{\text{Michigan}}$ - Offerings of honey were very light.

Colonies were in good condition and bee populations were heavy. Stores were ample.

Honey plants were dormant and soil moisture was normal.

Minnesota - Offerings of honey were light to moderate. Demand was good and the market was generally steady.

Colonies were in average condition and bee populations were moderate. Honey stores were generally ample, although there were some reports that bees had consumed more honey than normal for this early in the season.

Honey plants were dormant and in good condition. Soil moisture ranged from below normal to normal in different sections of the State.

 $\underline{\text{Ohio}}$ - Offerings of honey were light. Demand was good and the market steady.

Colony conditions were average to good and bee populations were moderate. Honey stores were ample, with bees in several sections going into the winter with much heavier stores than last year.

Honey plants were dormant and in good condition and soil moisture ranged from normal to above normal.

<u>Wisconsin</u> - Offerings of honey were moderate. Demand was generally good and the market was steady to slightly higher.

Colony conditions were average to good and bee populations were generally moderate, although poor in some areas due to summer spray loss. Stores were generally ample although above normal temperatures during the month caused bees to use their stores at a higher rate than normal. In some areas there was supplemental feeding of sugar syrup for weak colonies. Many beekeepers in the Midwest are wintering over more bees than normal due to the threatening shortage of package bees and queens next spring.

Honey plants were dormant and in generally good condition. Soil moistures ranged from below normal to generally normal.

NORTHEASTERN STATES

Connecticut - Offerings were moderate.

Demand was very good and the market was

Colony conditions were good and bee populations were moderate. Stores going into the winter were ample.

Honey plants were dormant and soil moisture was below normal.

Massachusetts - Offerings of honey were fairly light. Demand was very good and prices were generally higher.

Colonies were going into the winter in average to good condition and bee populations ranged from moderate to heavy. Stores were generally ample. Bees were dormant and being prepared for winter.

Honey plants were in good condition, although dormant and soil moisture was

 New Jersey - Offerings of honey were light. The demand exceeded the supply and prices were slightly higher.

Colony conditions were good and bee populations were moderate. Honey stores were ample and bees were working some late wild fields.

Honey plants were in good condition, although soil moisture was below normal.

New York - Offerings of honey were fairly light. Demand was good and the market was steady.

Colonies were in average condition. Bee populations were generally moderate. Stores were ample, although unusually warm weather had caused bees to consume greater than normal amounts of their stores.

Honey plants were dormant and in generally good condition. Soil moisture was normal in most areas of the State.

Pennsylvania - Offerings of honey were fairly light. Demand was good. The market was steady.

Colonies were in fairly good condition and bee populations ranged from moderate to heavy. Winter stores were ample.

Honey plants were dormant, although in good condition with normal soil moisture.

Vermont - Offerings were moderate, demand was good and the market was steady.

Colonies were in average condition with moderate bee populations. Stores were ample and bees were dormant and wrapped for the winter.

Honey plants were dormant and in good condition with normal soil moisture.

SOUTH ATLANTIC STATES

Kentucky - Offerings of honey were quite light. Demand was good although there was some reports that sales had slowed. Prices were generally unchanged.

Colonies were in average to good condition and bee populations were moderate. Store were ample, although some colonies received supplemental feeding during the month.

Honey plants were dormant and soil was above normal.

Maryland - Offerings of honey were light. Demand exceeded supply and the market was slightly higher.

Colonies were in average condition with moderate bee populations. Stores were ample with a greater than normal amount of nectar brought in from the October Aster bloom.

North Carolina - Offerings of honey were very light.

Colonies were going into the winter in good condition with moderately heavy bee populations. Bees worked fall Aster well into the month.

Soil moisture was below normal as warm, dry weather continued.

Tennessee - Offerings of honey were moderate with some beekeepers sold out. Demand was good and prices were steady to slightly higher.

Colony conditions were fairly good with moderate bee population. Stores going into the winter were ample.

Honey plants were dormant and soil moisture was normal.

<u>Virginia</u> - Offerings of honey were fairly light. Demand was good and prices were steady.

Colonies were going into winter in average condition with moderate bee populations. Stores were light and supplemental feeding of sugar syrup was necessary.

SOUTHEASTERN STATES

Georgia - Very little if any honey was in the hands of beekeepers. Demand was good and the market was firm.

Bees were mostly dormant and colonies were in generally normal condition with average bee populations and stores. No surplus honey was made this fall.

Temperatures during November were warmer than normal and rainfull was below average.

Market prices (sales or quotations as indicated under each city) shown below were obtained from local brokers, packagers, wholesalers and other receivers in the respective cities. Current quotations are shown for markets where sales for the period could not be obtained. Sales are usually subject to a one percent(1%) discount if payment is made within 10 days. Comments on market conditions reflect the opinion of the local trade for the month of November. Sixty pound cans are on a per pound basis and smaller units of honey are on per case basis unless otherwise stated: Beeswax prices are per pound.

BROOD DISEASES OF HONEY BEES

By H. Shimanuki, microbiologist, Entomology Research Division, Agricultural Research Service

Bee diseases result in losses amounting to millions of dollars annually. In 1963, various States spent an estimated \$1 million in apiary inspection for American foulbrood. In the same year the value of colonies destroyed under State Laws to control American foulbrood exceeded \$470.000. European foulbrood, sacbrood, nosema disease, septicemia, paralysis, and other diseases and enemies are estimated to cause losses in excess of 10 times that

of American foulbrood. In addition to these figures, bee diseases cause considerable losses, which are difficult to estimate, through reduced honey and beeswax production and crop pollination. It is apparent, therefore, that both beginning and advanced beekeepers should learn to recognize and control bee diseases.

A guide for diagnosing brood diseases of honey bees is given in table 1.

Table 1.—Differentiating characters of brood diseases

Characters to observe	American foulbrood	European foulbrood	Sacbrood
Appearance of brood comb.	Sealed brood; discolored, sunken, or punctured cappings.	Unsealed brood; some sealed brood in advanced cases, with discolored, sunken, or	Scaled brood; scattered cells with punctured cappings, often with 2 holes.
Age of dead brood	Usually older sealed larvae or young pupae; occasionally younger unscaled larvae.	punctured cappings. Usually young unscaled larvae; occasionally older	Usually older sealed larvae; occasionally young unscaled
Color of dead brood	Dull white, becoming, yellow, light brown, coffee brown to dark brown or almost black.	sealed larvae. Dull white, becoming yellowish white to brown, dark brown, or almost black;	harvae or young pupae. Grayish or straw colored, becoming brown, grayish black, or black; head end
Consistency of dead brood. Odor of dead brood	Soft, nonsticky, becoming sticky to ropy. Slight to pronounced typical	often unevenly colored. Watery to pasty; rarely sticky or ropy. Slight to penetratingly sour.	darker. Watery and granular; tough skin forms sac. None to slightly sour.
Scale characteristics	odor. Brittle; rough texture; lies flat on lower side of cell; adheres tightly to cell wall; head iying flat; fine, threadlike tongue of dead pupae adheres to opposite wall of cell.	Rubbery; smooth texture; usually twisted in cell; does not adhere tightly to cell wall.	flat on lower side of cell; does not adhere tightly to cell wall; head prominently curled up.
